

# Internet of Things @UL

Data, Metadata & Wisdom.

What can Data Analytics tell us about the Decisions People make?

Dr Martin Hayes, [martin.j.hayes@ul.ie](mailto:martin.j.hayes@ul.ie)

E&CE Department, UL.

Tourism Policy Workshop Nov 18<sup>th</sup> 2016

# Structure of this Presentation

- What is Data Engineering ?
- What Relevance has Data Engineering to the Internet of Things (IoT)?
- Practical IoT Case Studies
  - The IoT Light bulb (Sharepoint)
  - Smart Grid / Energy (ESB)
  - Agriculture (Analog Devices)
  - Sport (Analog Devices)
  - Cognitive Campus/Visitor Attractions (IBM)
- Big Data – Machine Learning
- Big Data based Decision Making Example
- Some thoughts/advice on IoT adoption in the Tourism Sector

# What is an IoT \ Data Engineer?

- Computer Engineering?
- Electronic Engineering?
- Data Engineer?

- It might also be nice to have some application specific skills!!

UNIVERSITY  
of  
LIMERICK

OULSCOIL LUIMNIGH

# E&CE

Department of  
Electronic & Computer  
Engineering

# Data Engineering Positions advertised by these companies in 2015/6

- Data Engineer
- Data Scientist
- Data Analyst
- Data Architect
- Data Visualization
- Data Mining
- Data Wrangling / Munging
- Data Scraping
- Data Cleansing
- Data Plumbing
- Data Warehousing

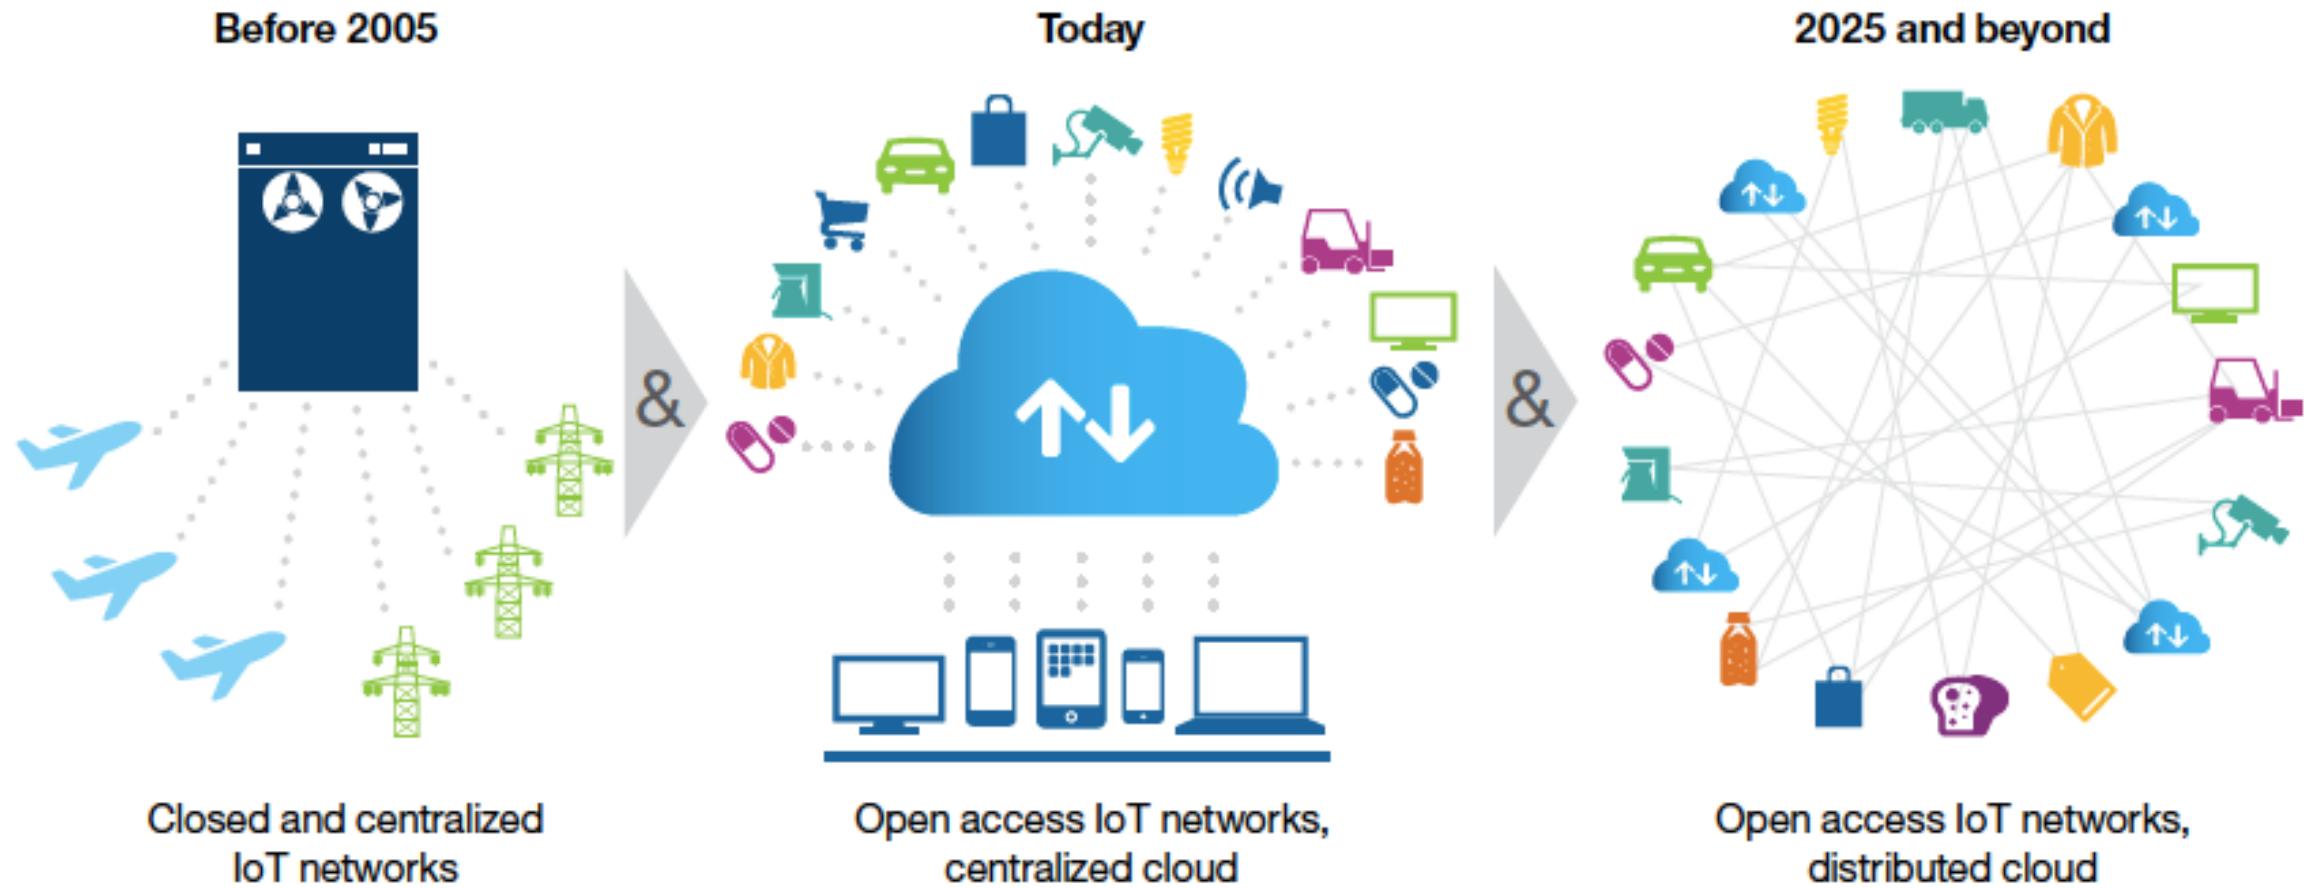

**Management Challenge :**  
How to avoid being dragged into the weeds of  
technical detail?

# What is Data Engineering?

- Data Engineering / Data Science
- “The exploration and quantitative analysis of all available structured and unstructured data to develop understanding, extract knowledge and to formulate actionable results”
  - Edx / MITx Data Science Essentials MOOC
- Metadata is some subset of the Raw Data set that it is hoped imparts more Information and Knowledge
- Data science asks how much useful information can be derived from such a dataset?
- Data Engineering asks how a metadata set can be constructed so as to maximise the utility of this information.
- Data Engineering also attempts to ‘close the loop’ – make decisions on the basis of data. How do we get more ‘good’ decisions?
- We will consider a Sports based example of this later.

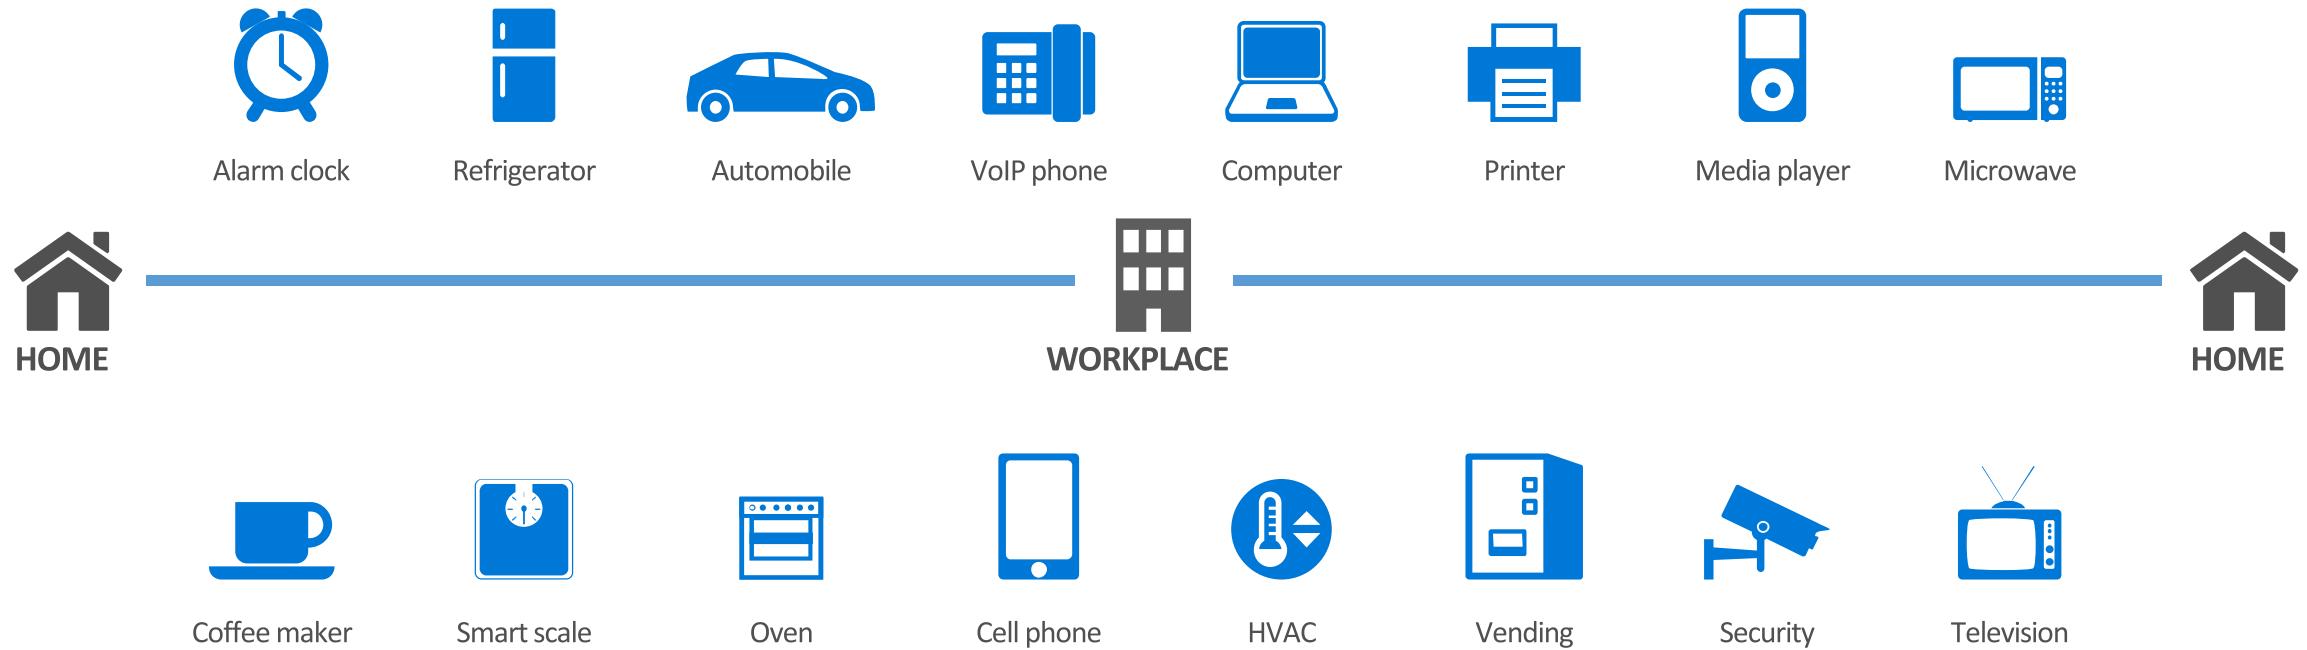

# How has IoT evolved and what will it look like?

- **Machine-to-Machine (M2M) Technology**

- Objects that connect themselves to the Internet with sensor-embedded devices are commonly referred to as the *Internet of Things* (IoT).

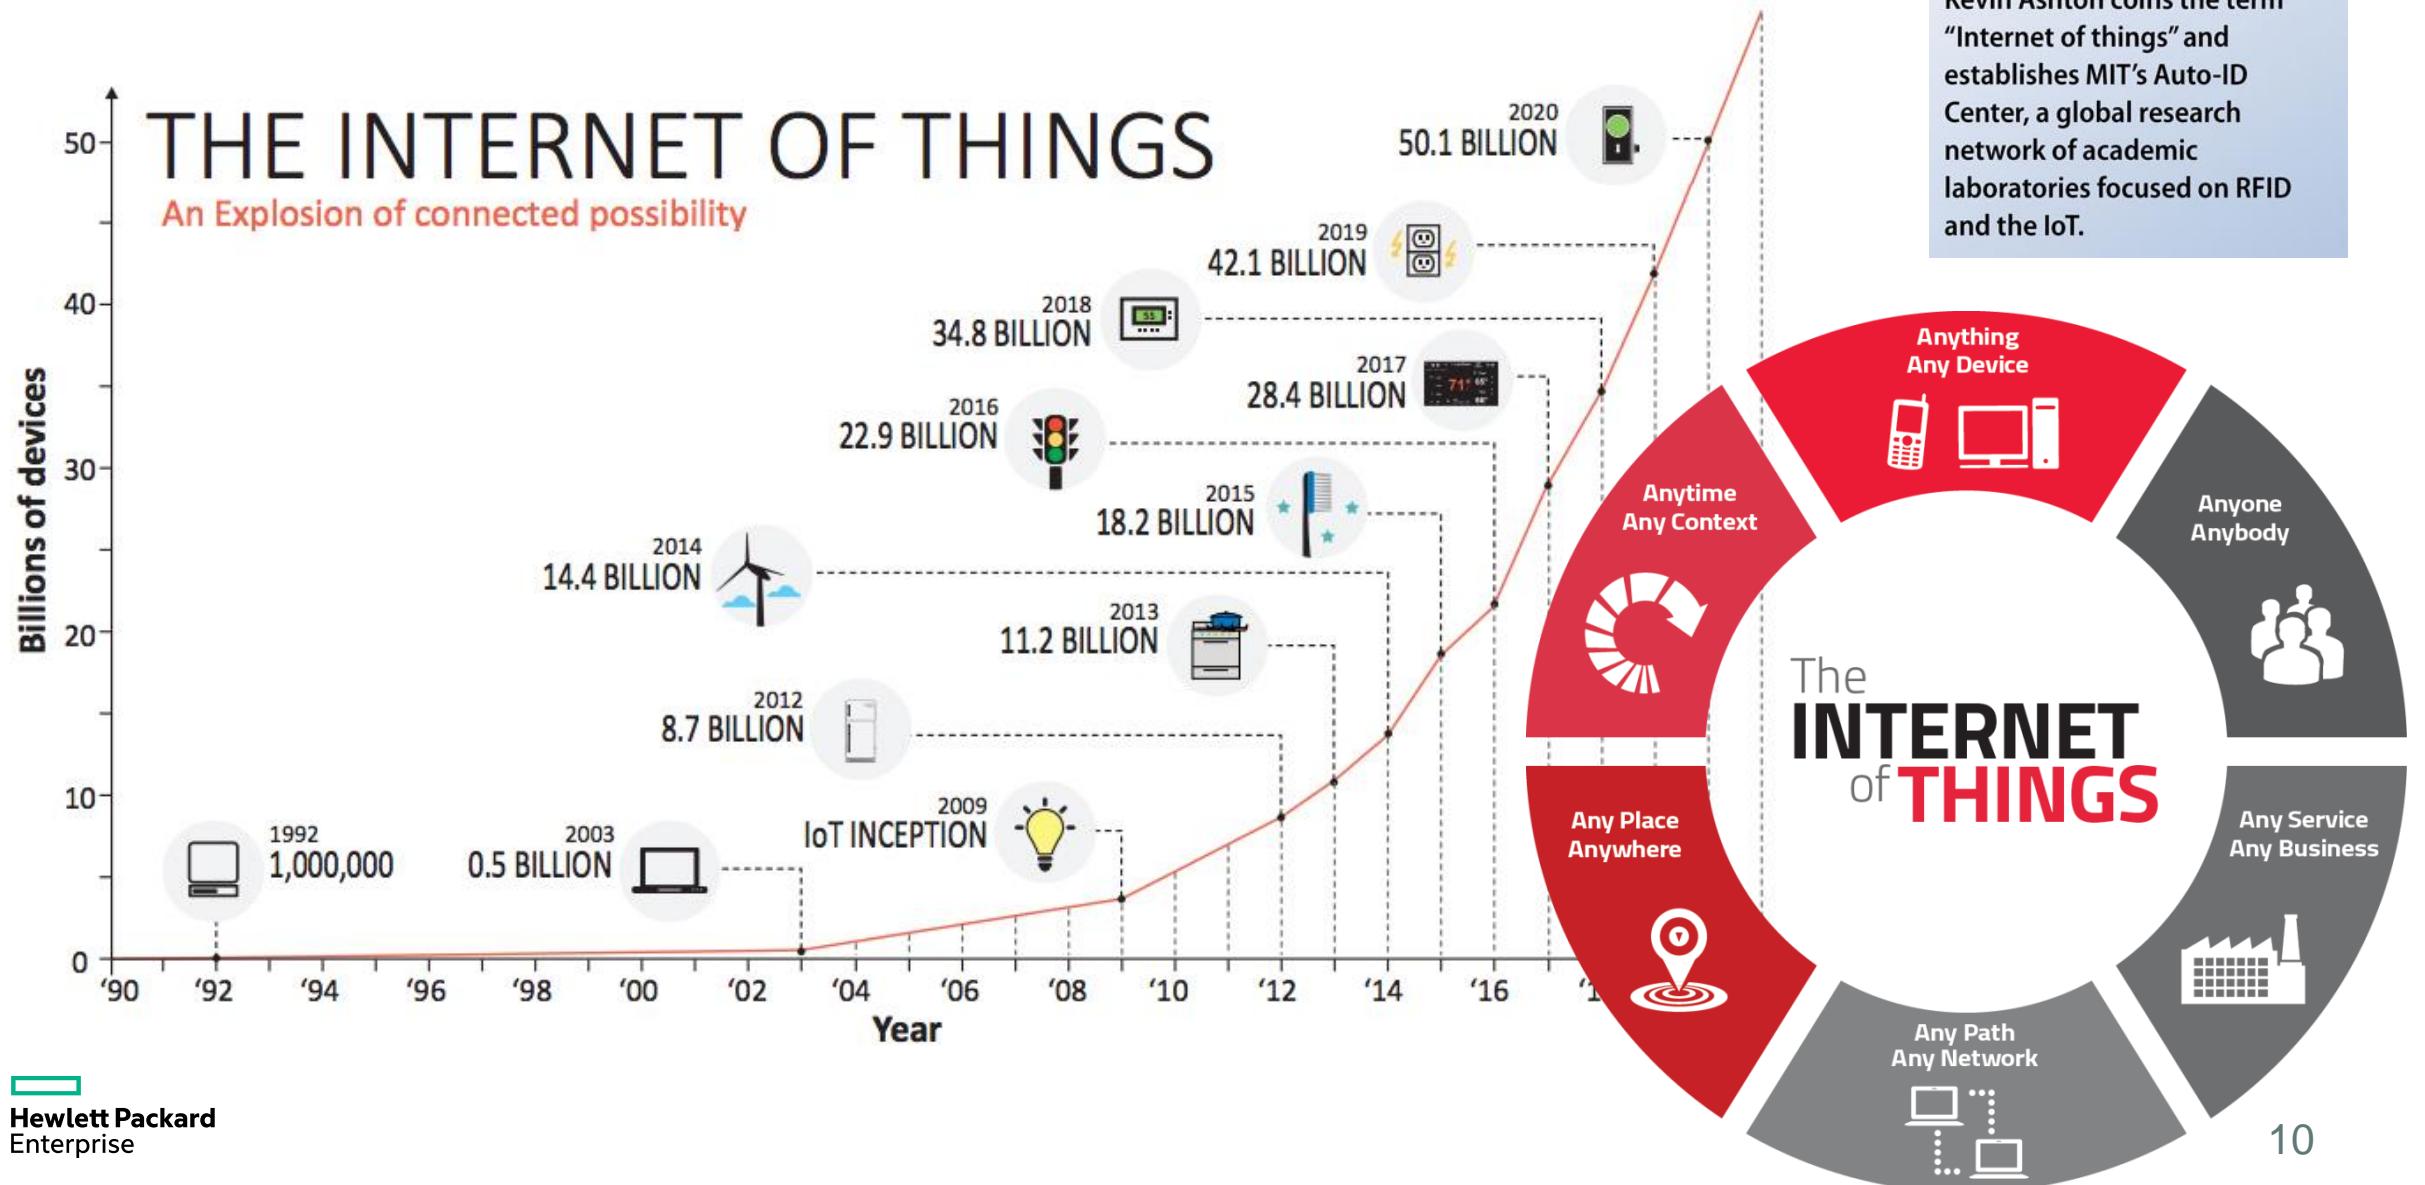

# Evolution of IoT (The World in 2011)

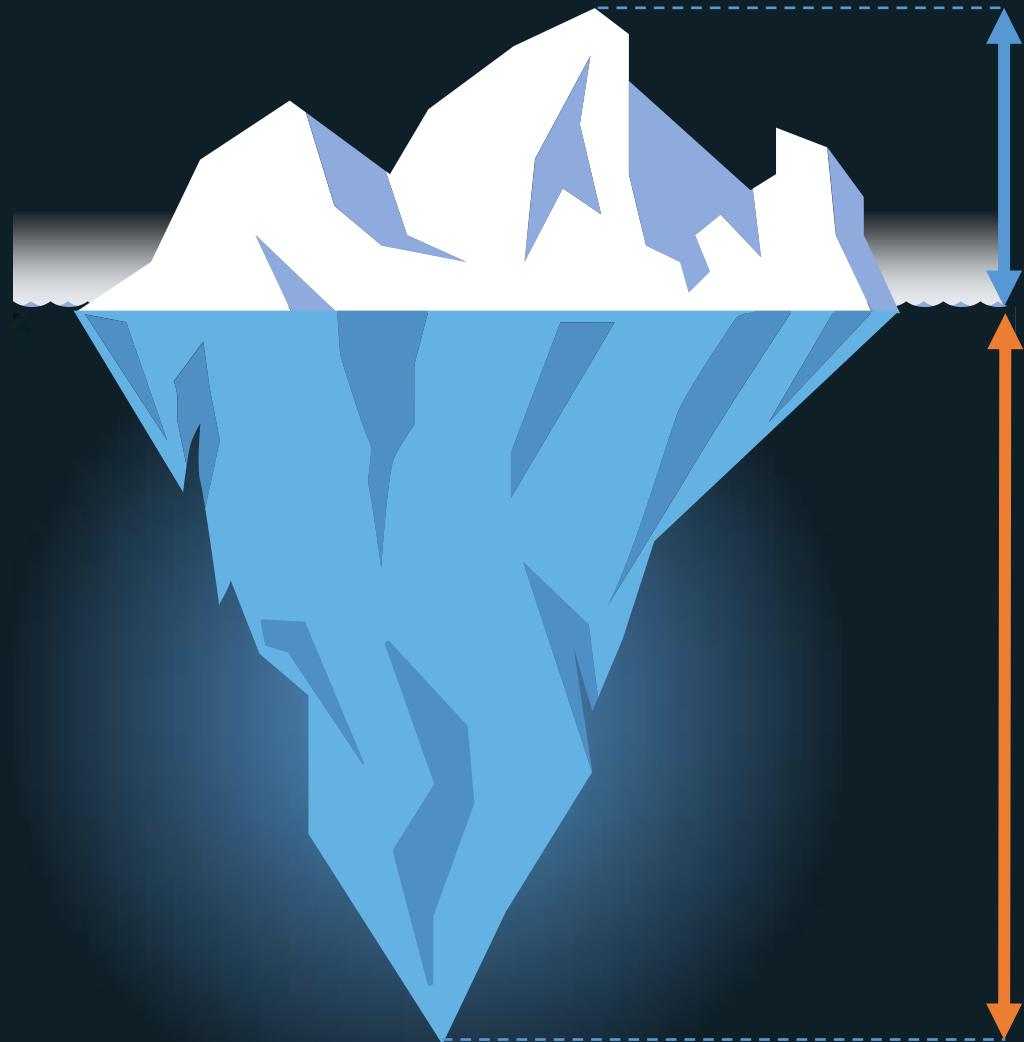

# IoT in 2016

# IoT History

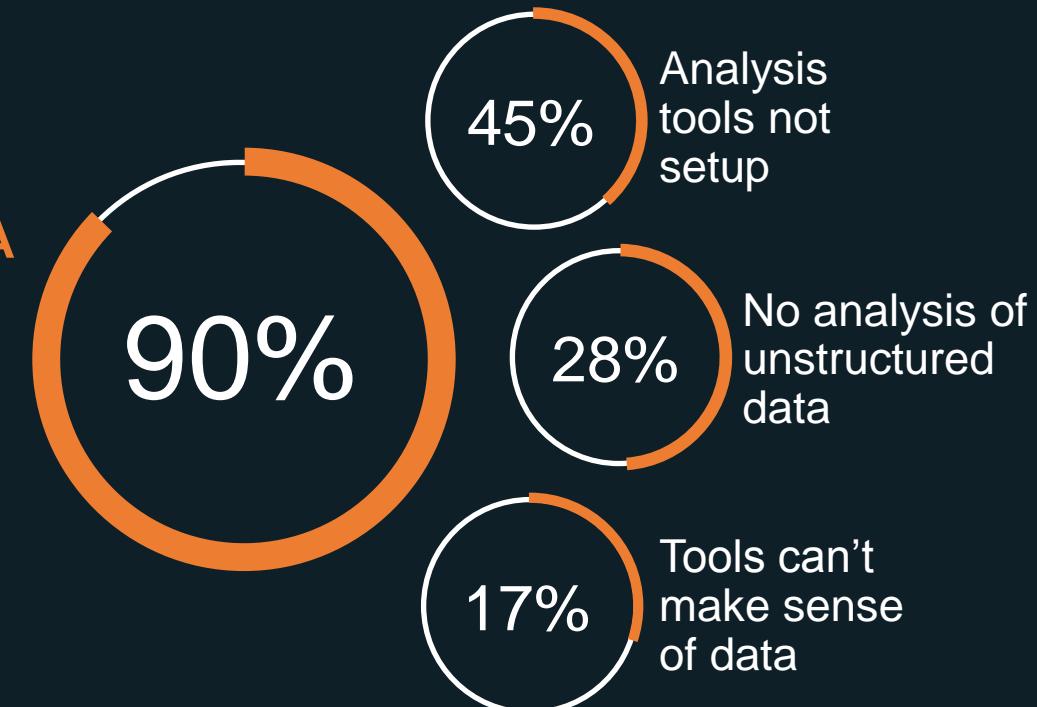

# The Dark Side of Big Data

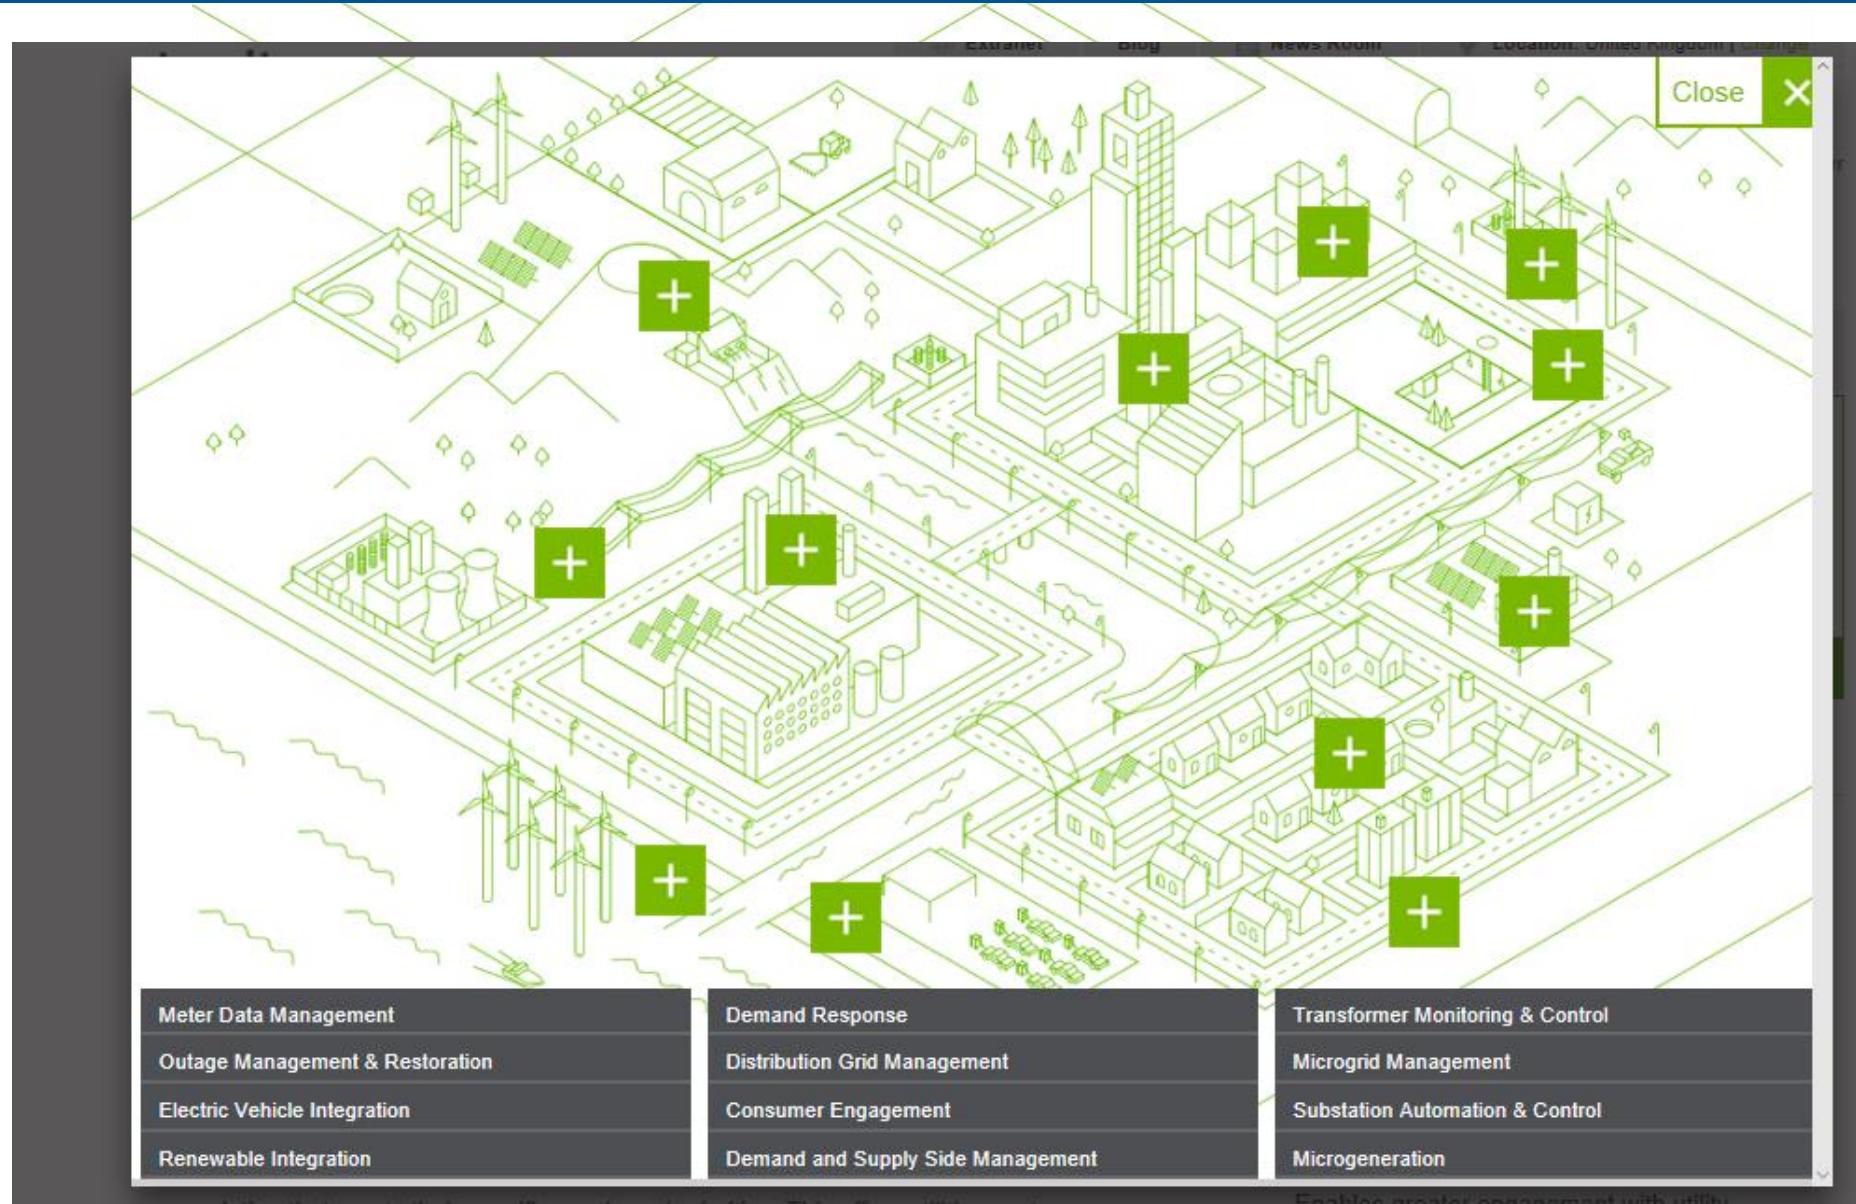

## USED DATA

**DARK DATA**  
sensor data  
that is never  
utilised

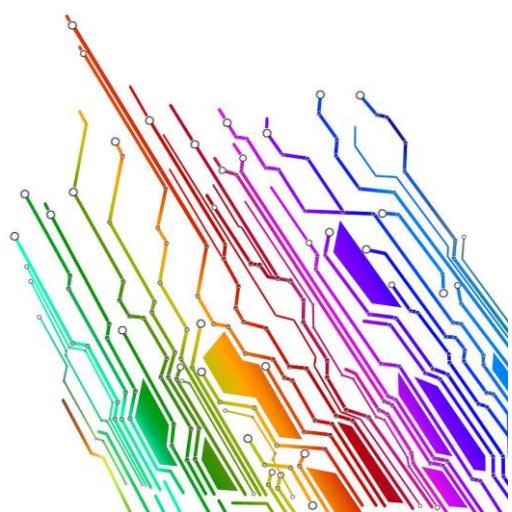

# Smart Grid Applications - [www.landisgyr.co.uk/gridstream-solutions/](http://www.landisgyr.co.uk/gridstream-solutions/)

# 2016 Design Challenge

- IDA 'connected' industrial estate.
- Shared/co-operative Heating & Lighting
- Retrofit 'smart' solar PV panels to existing roof structure
- Smart Meter Connectivity
  - 'Nest' thermostats
- Tesla Powerwall deployment
- Smart , Connected Storage Heaters (Glen Dimplex)
- ESB Vehicle charging points
- High Speed Fibre Optic Network – SIRO

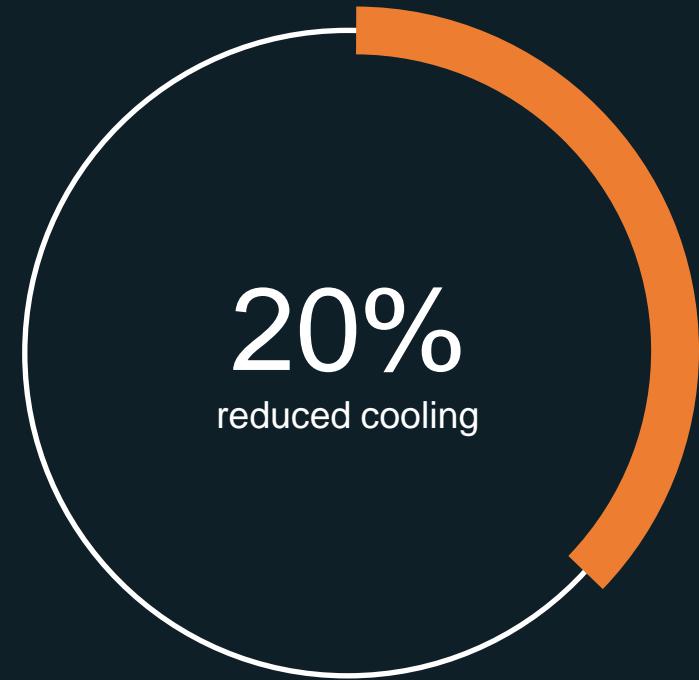

## Example – Tesco Ireland

- Tesco invested strongly in monitoring infrastructure within stores to make them more energy efficient
- The collected data was so big that they did not know what to do with it
- IBM Research helped them to analyze their data and identify saving potential

160  
Stores

110.956  
Data Objects

678 TB  
Data per annum

25 million Dollar  
savings per annum

# IoT Light Bulb Example

- With thanks to John Savage - Action Point
- An IoT app is required for a Lightbulb – Pretty easy ‘toe in the water’ introductory example to illustrate what's involved...
- Undergraduate Computer Engineers can design the Hardware,
  - LEDs,
  - DC-DC Converters,
  - Power Control,
  - IoT Socket.
- IoT app ..and we're done – How much will all this cost ?

## The commercial reality behind the “Bright” Idea

### Development Costs

Platform Choices  
(Desktop, iOS, Android etc.)  
Architecture Design  
UI/UX Design  
Development  
Testing

### Operational Costs

Server/Storage  
Infrastructure  
Support  
Updates

### Roadmapping

MVC vs Go-live vs future enhancements

### IoT Device Management

Connectivity (WiFi, BLE, Sigfox, Zigbee)  
Logistics  
Manufacturing  
Provisioning  
Field Engineering Support  
Billing Engine

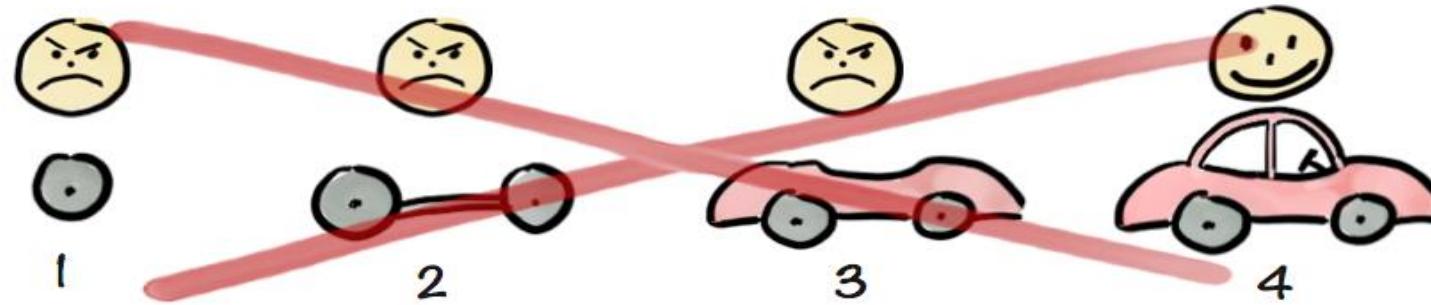

### Customer Service

Support  
Device & System Updates

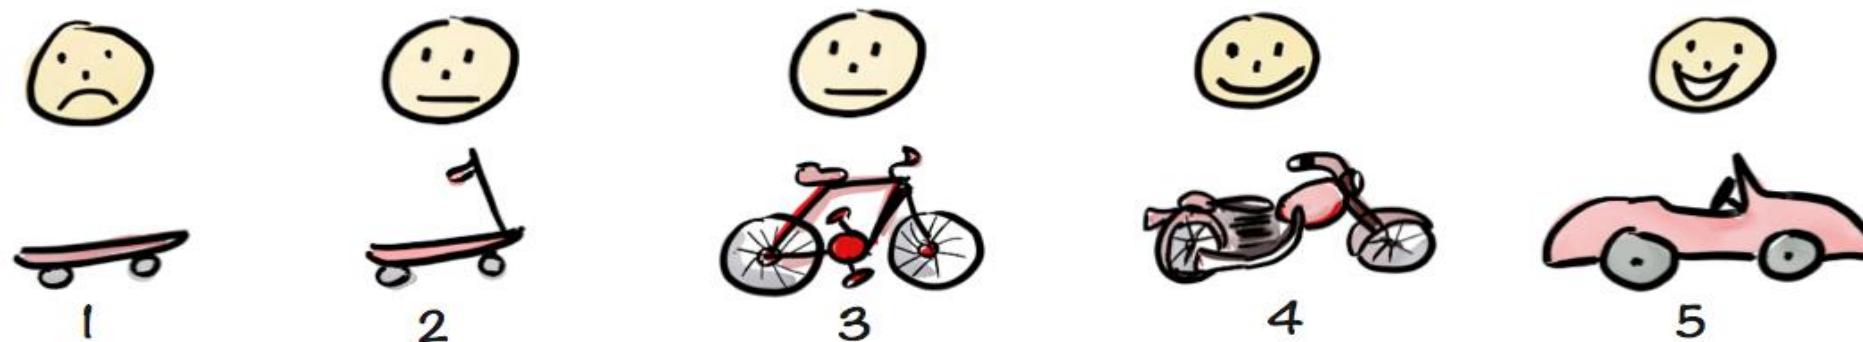

So how do you budget for this?

# IoT Light Bulb Example – Incrementalism is Key!!

Not like this....

Like this!

# First Responder Example - Analog Devices

## Central Hub

- UWB Radio Ranging Reference Anchors
- Main computer/central processing

## Arm Unit

- UWB Radio Ranging Tag
- Bluetooth Radio
- Comm. to Hub
- Battery

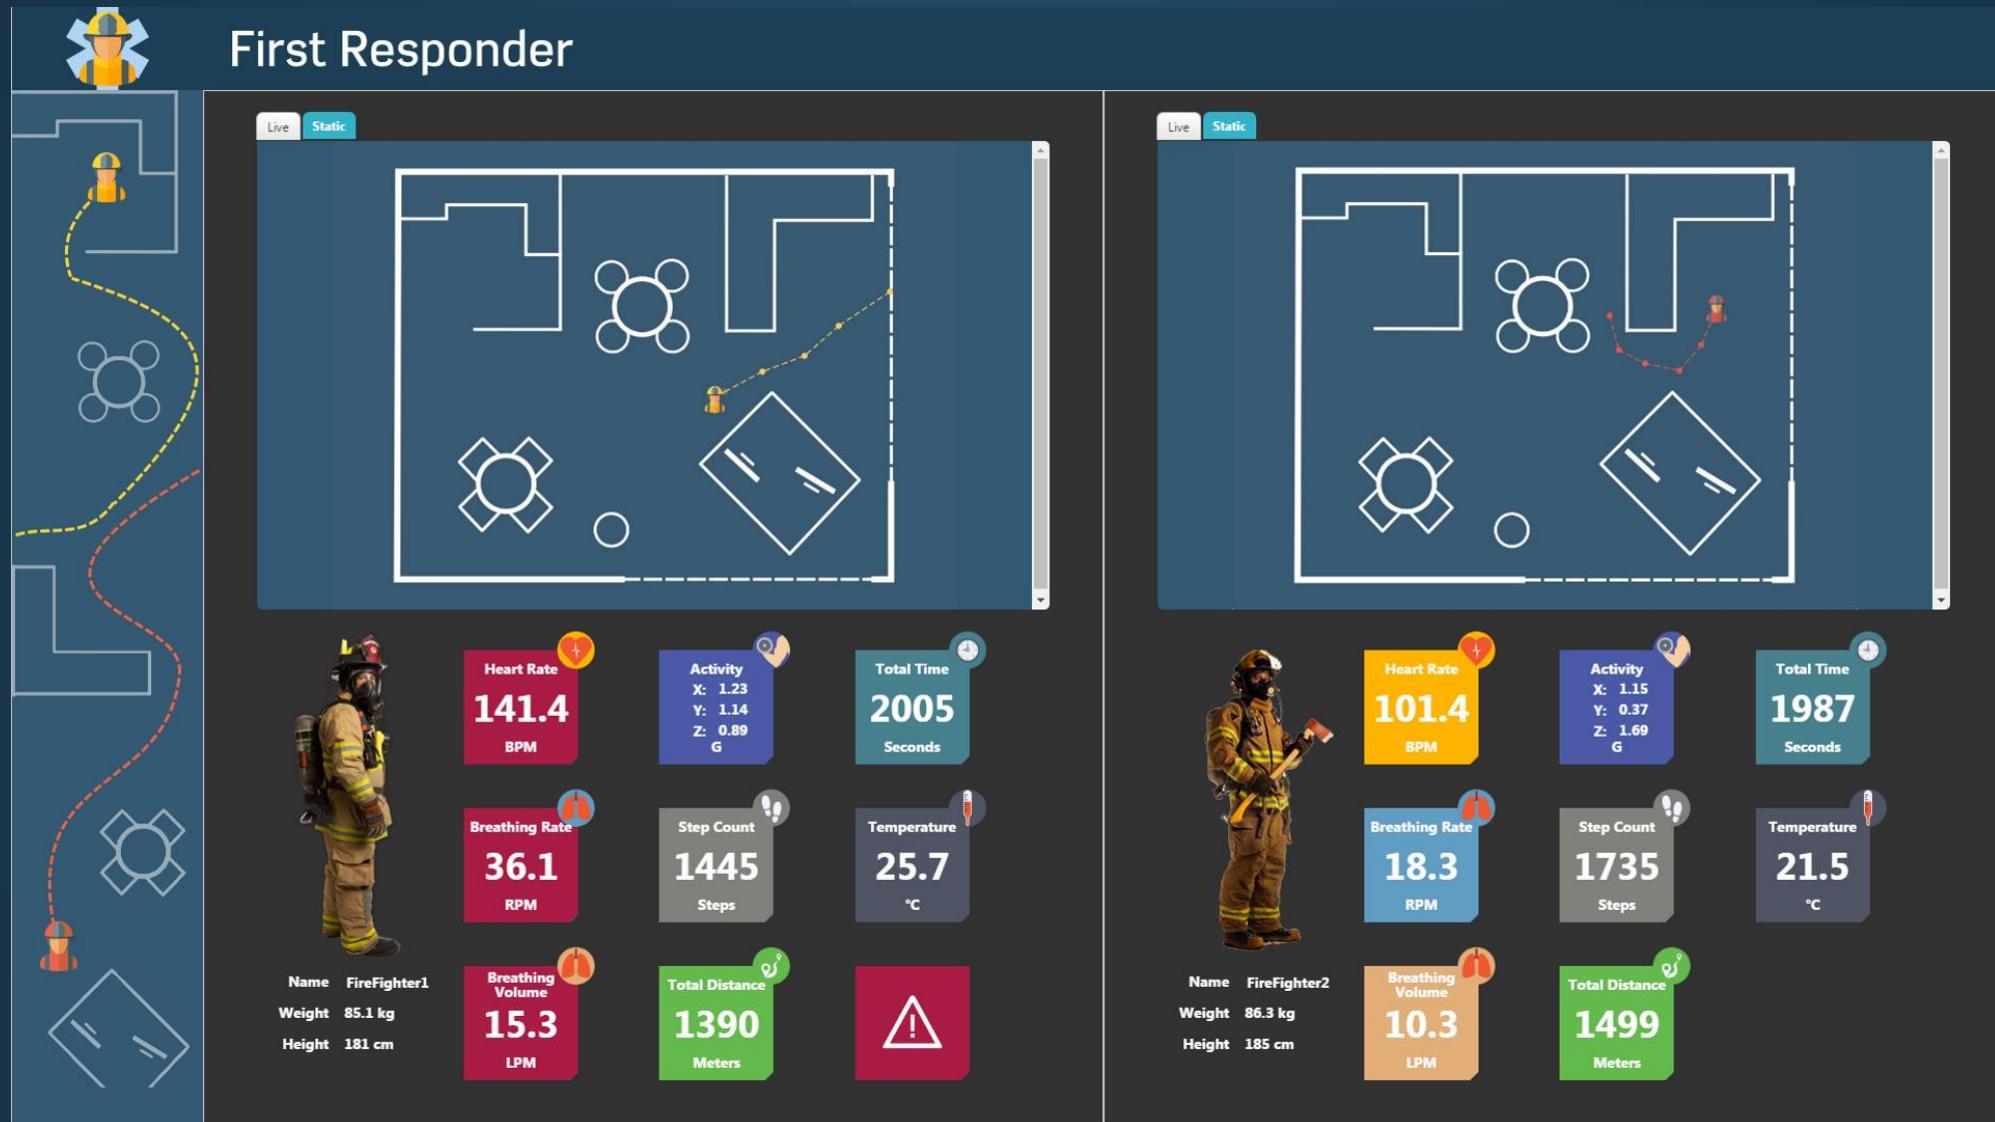

## Boot Module

- High Performance IMU
- Processor Board
- Bluetooth Radio
- Battery

GPS Fix + Radio Ranging + IMU + SLAM software  
delivers Sensor Fused “Holy Grail” Solution

# First Responder

# First Responder Example – How is Decision Making Improved?

Framed in an ad-hoc power  
efficient network  
configuration

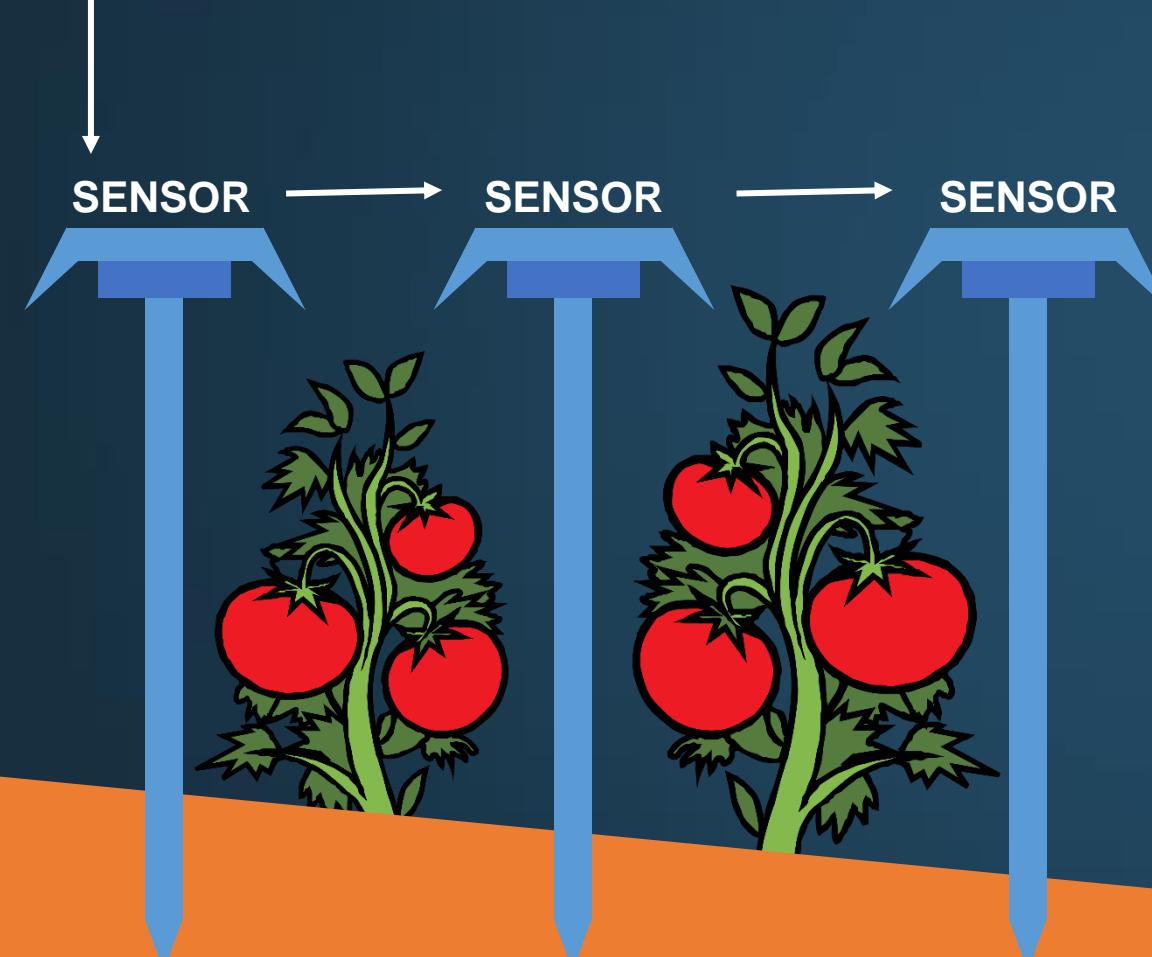

- Localise rescue worker position
- Monitor structural integrity
- Access temperature in each room in the building prior to entry
- Communicate a possible escape route to rescue worker
- Observe injured parties vital signs
- Inform (NOT make!) decision regarding who to treat first)

# THE INTERNET OF TOMATOES

**SENSOR NODE:** → **MEASURES**

Sensing | Processing | Connecting → Motion | Light | Temp | Humidity

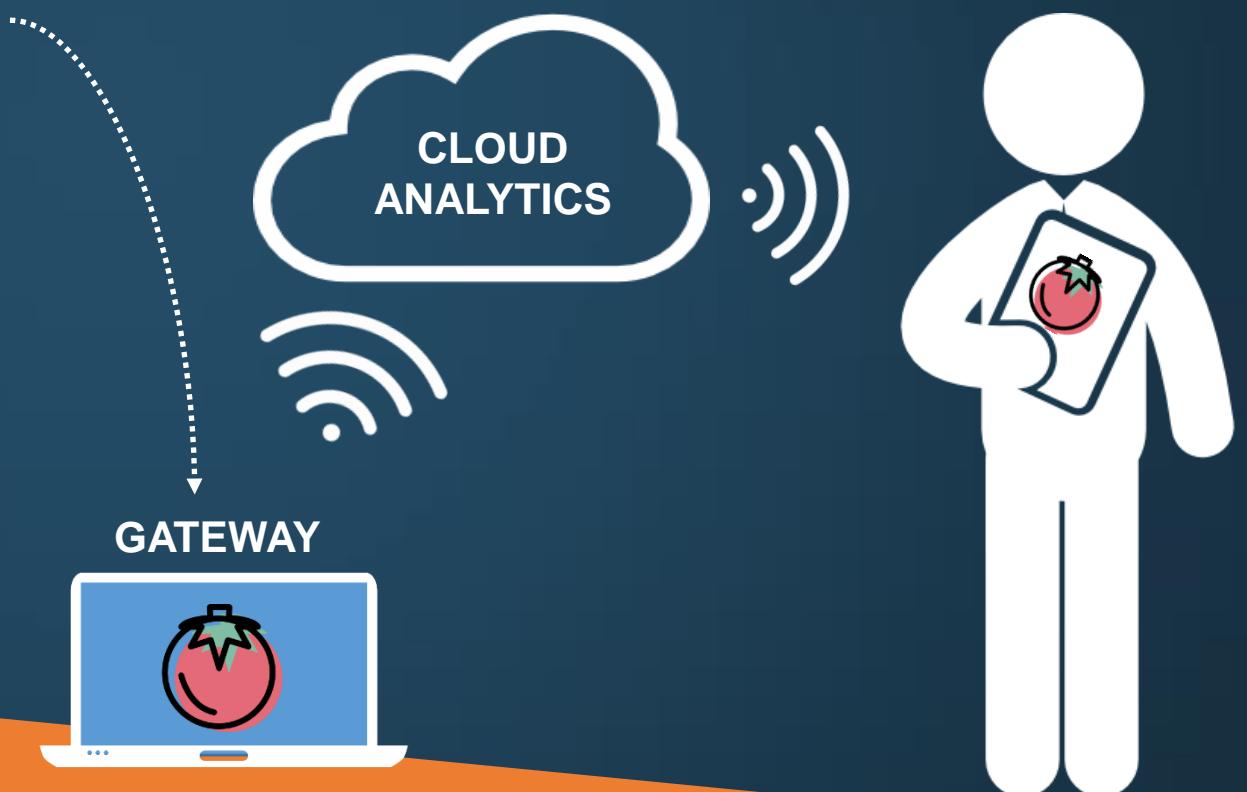

## FROM SEED TO SIGNAL

Analog devices' technology measures growing conditions and aggregates to a remote gateway.

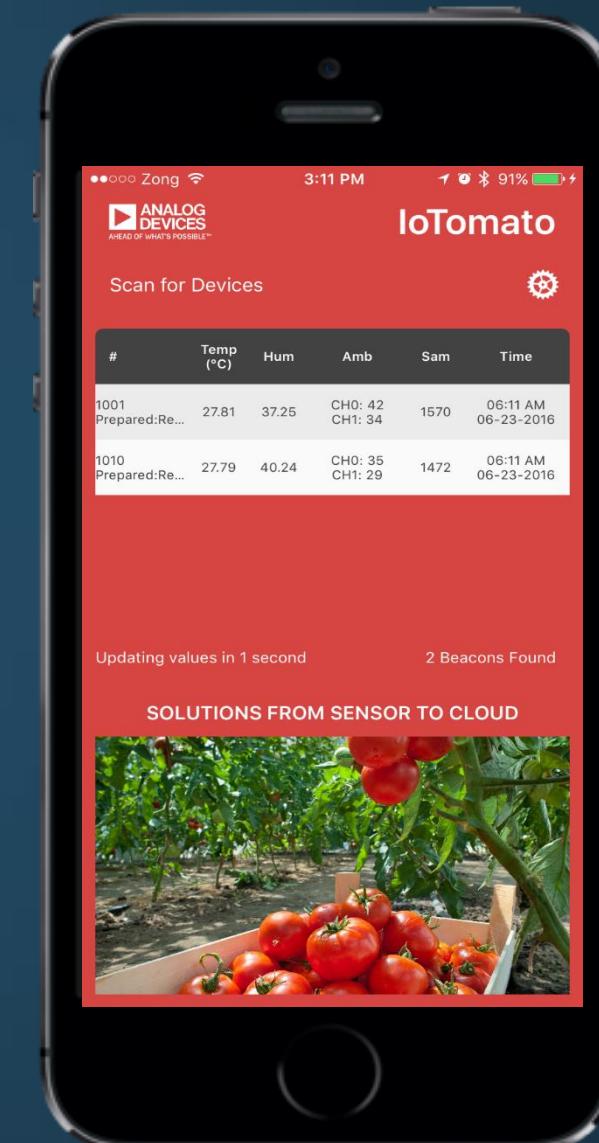

## FROM FIELD TO FARMER

Information is transmitted to the cloud to be analyzed and shared remotely.

# FIELD TO FARMER

---

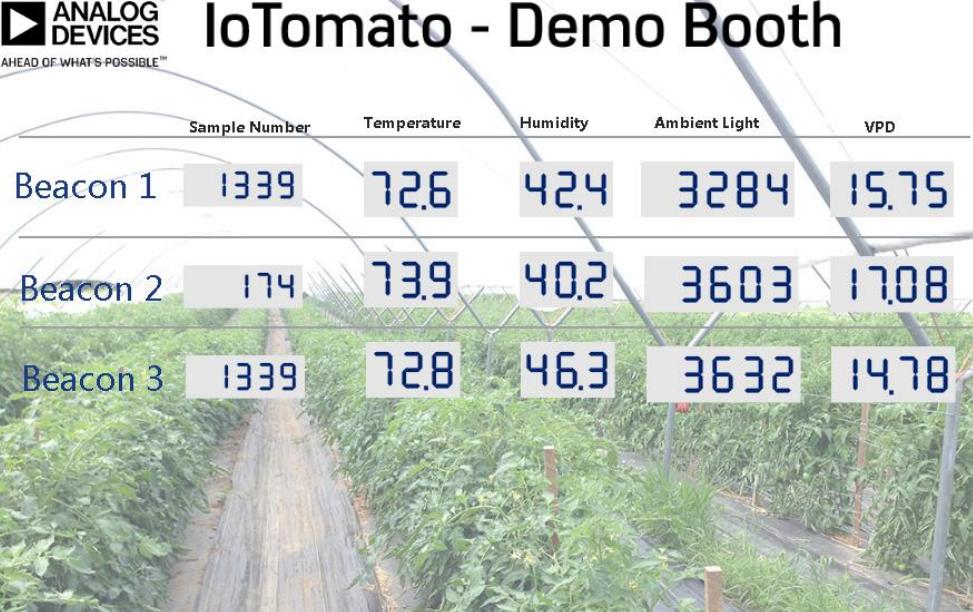

# CLOUD ANALYTICS

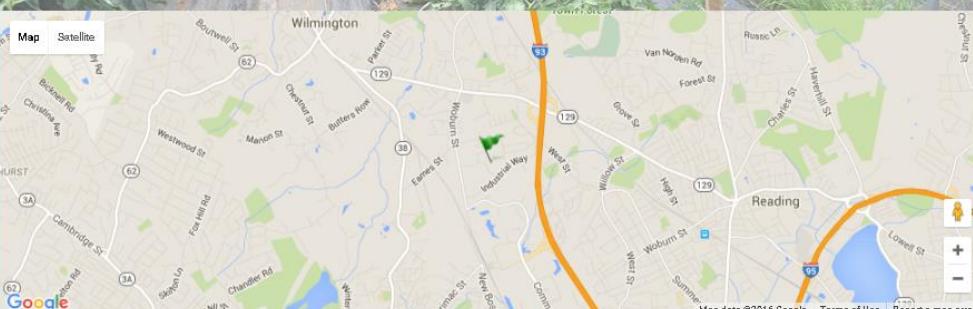

**IoTomato - Demo Booth**

ANALOG DEVICES AHEAD OF WHAT'S POSSIBLE™

	Sample Number	Temperature	Humidity	Ambient Light	VPD
Beacon 1	1339	72.6	42.4	3284	15.75
Beacon 2	174	73.9	40.2	3603	17.08
Beacon 3	1339	72.8	46.3	3632	14.78

Beacon 1 (Blue), Beacon 2 (Green), Beacon 3 (Red)

# The Cognitive Campus / IoT Attraction - Various Opportunities and Challenges

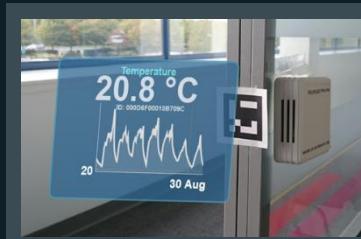

## DIGITAL ASSET LIFECYCLE

The manual input of data into a maintenance system for thousands of assets is a costly, error prone process.

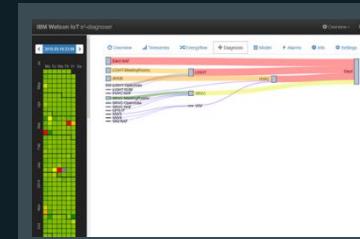

## REAL TIME ASSET LOCATION

Finding assets and their relevant data is challenging, in particular when you are in the field.

## COGNITIVE ASSET HEALTH

Predictive and preventive maintenance are imminent to reduce operation costs, but, lack the required sensors.

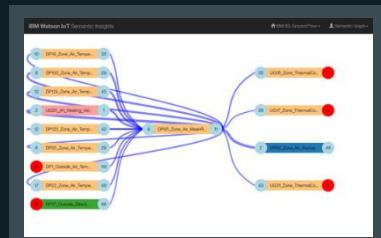

## SELF-LEARNING ENERGY DIAGNOSER

Energy consumption has many influences and it is hard to detect and diagnose abnormal consumption.

## COGNITIVE CONCIERGE

Guiding people to their rooms and answering their questions is a central requirement of hospitality.

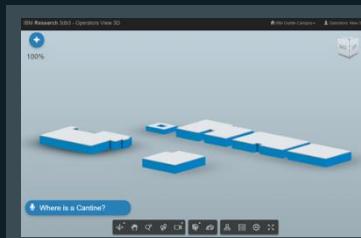

## SEMANTIC INSIGHTS

Analyzing thousands of IoT devices cannot provide meaningful insights without a semantic method.

## FLUID SPACES

The lack of real-time occupancy information within a building inhibits effective energy and space performance.

## MY COGNITIVE CAMPUS

Increase productivity of teams by providing a comfortable environment and easy navigation.

## MY ARTEFACT

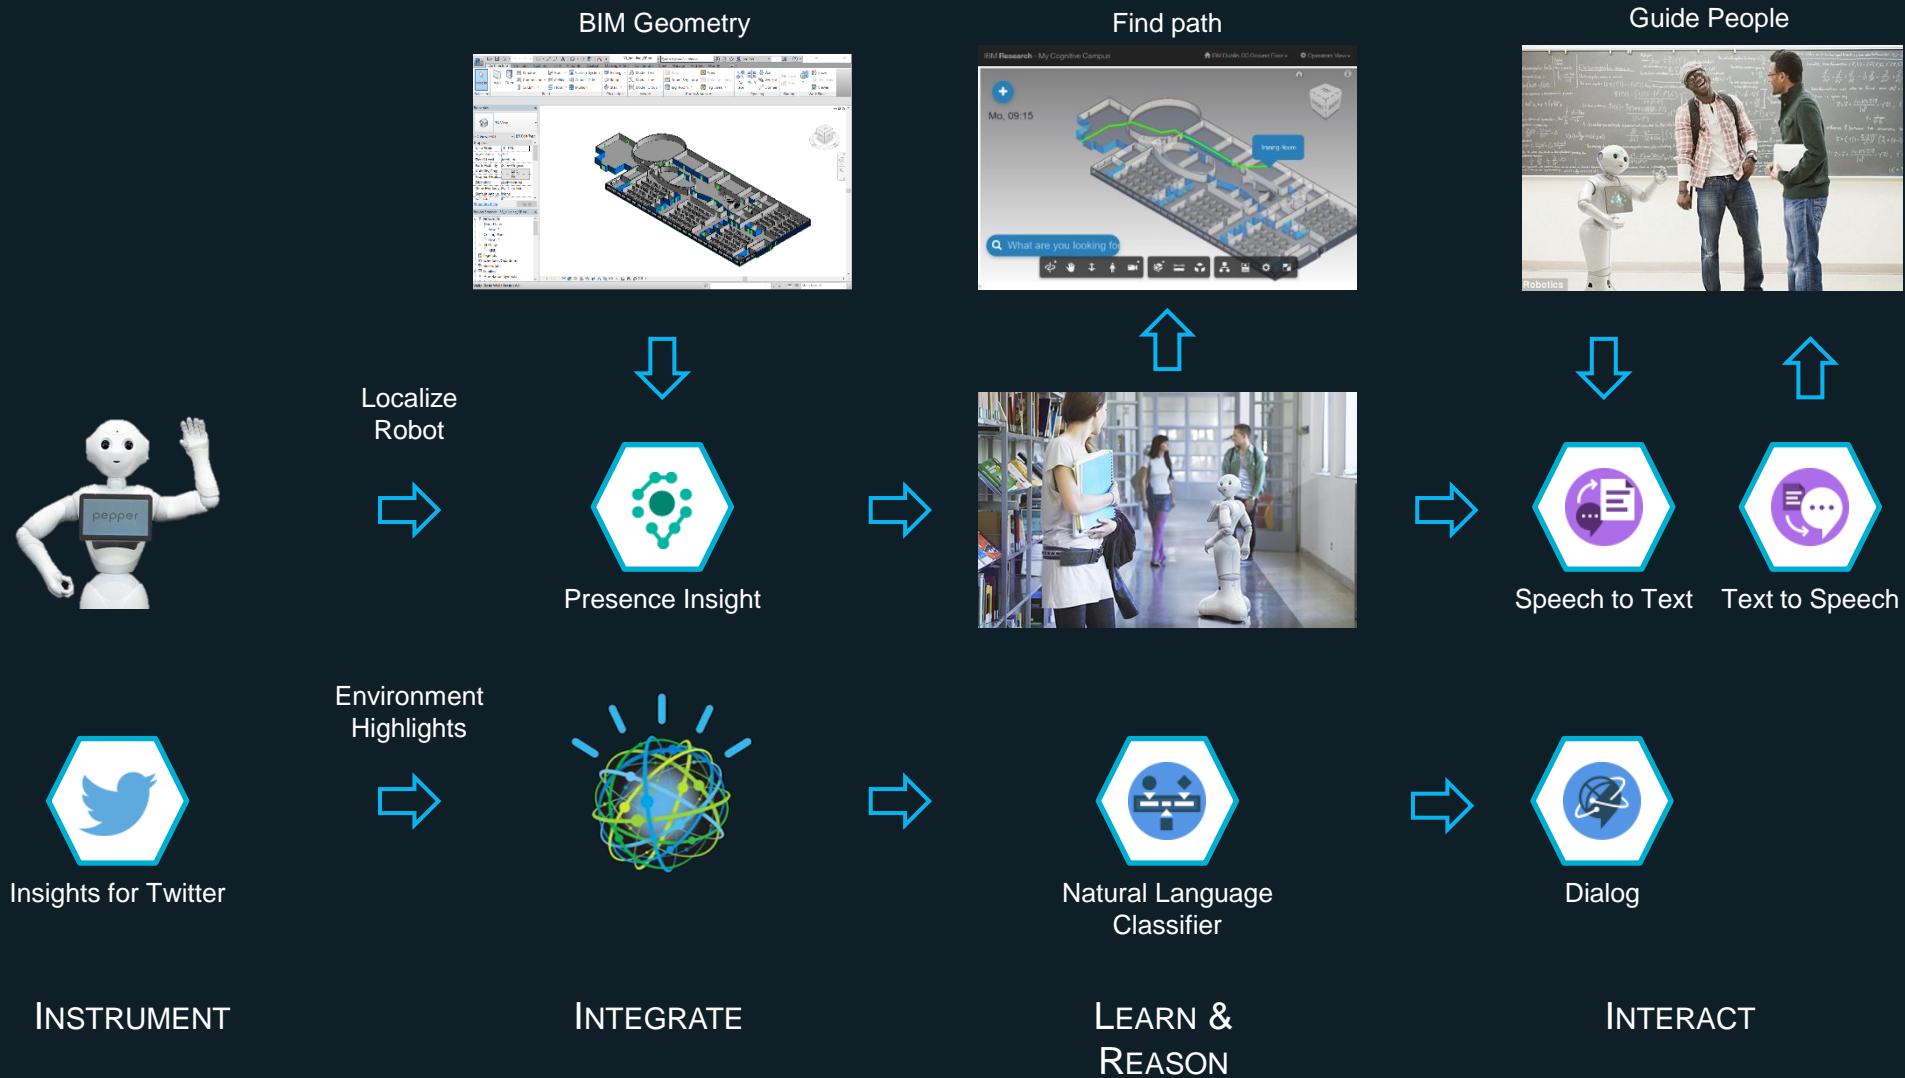

Maintaining the perfect environment for art galleries and museums is critical.

## SCALABLE IoT PLATFORM

Cognitive Buildings require a highly scalable platform for data integration and analysis.

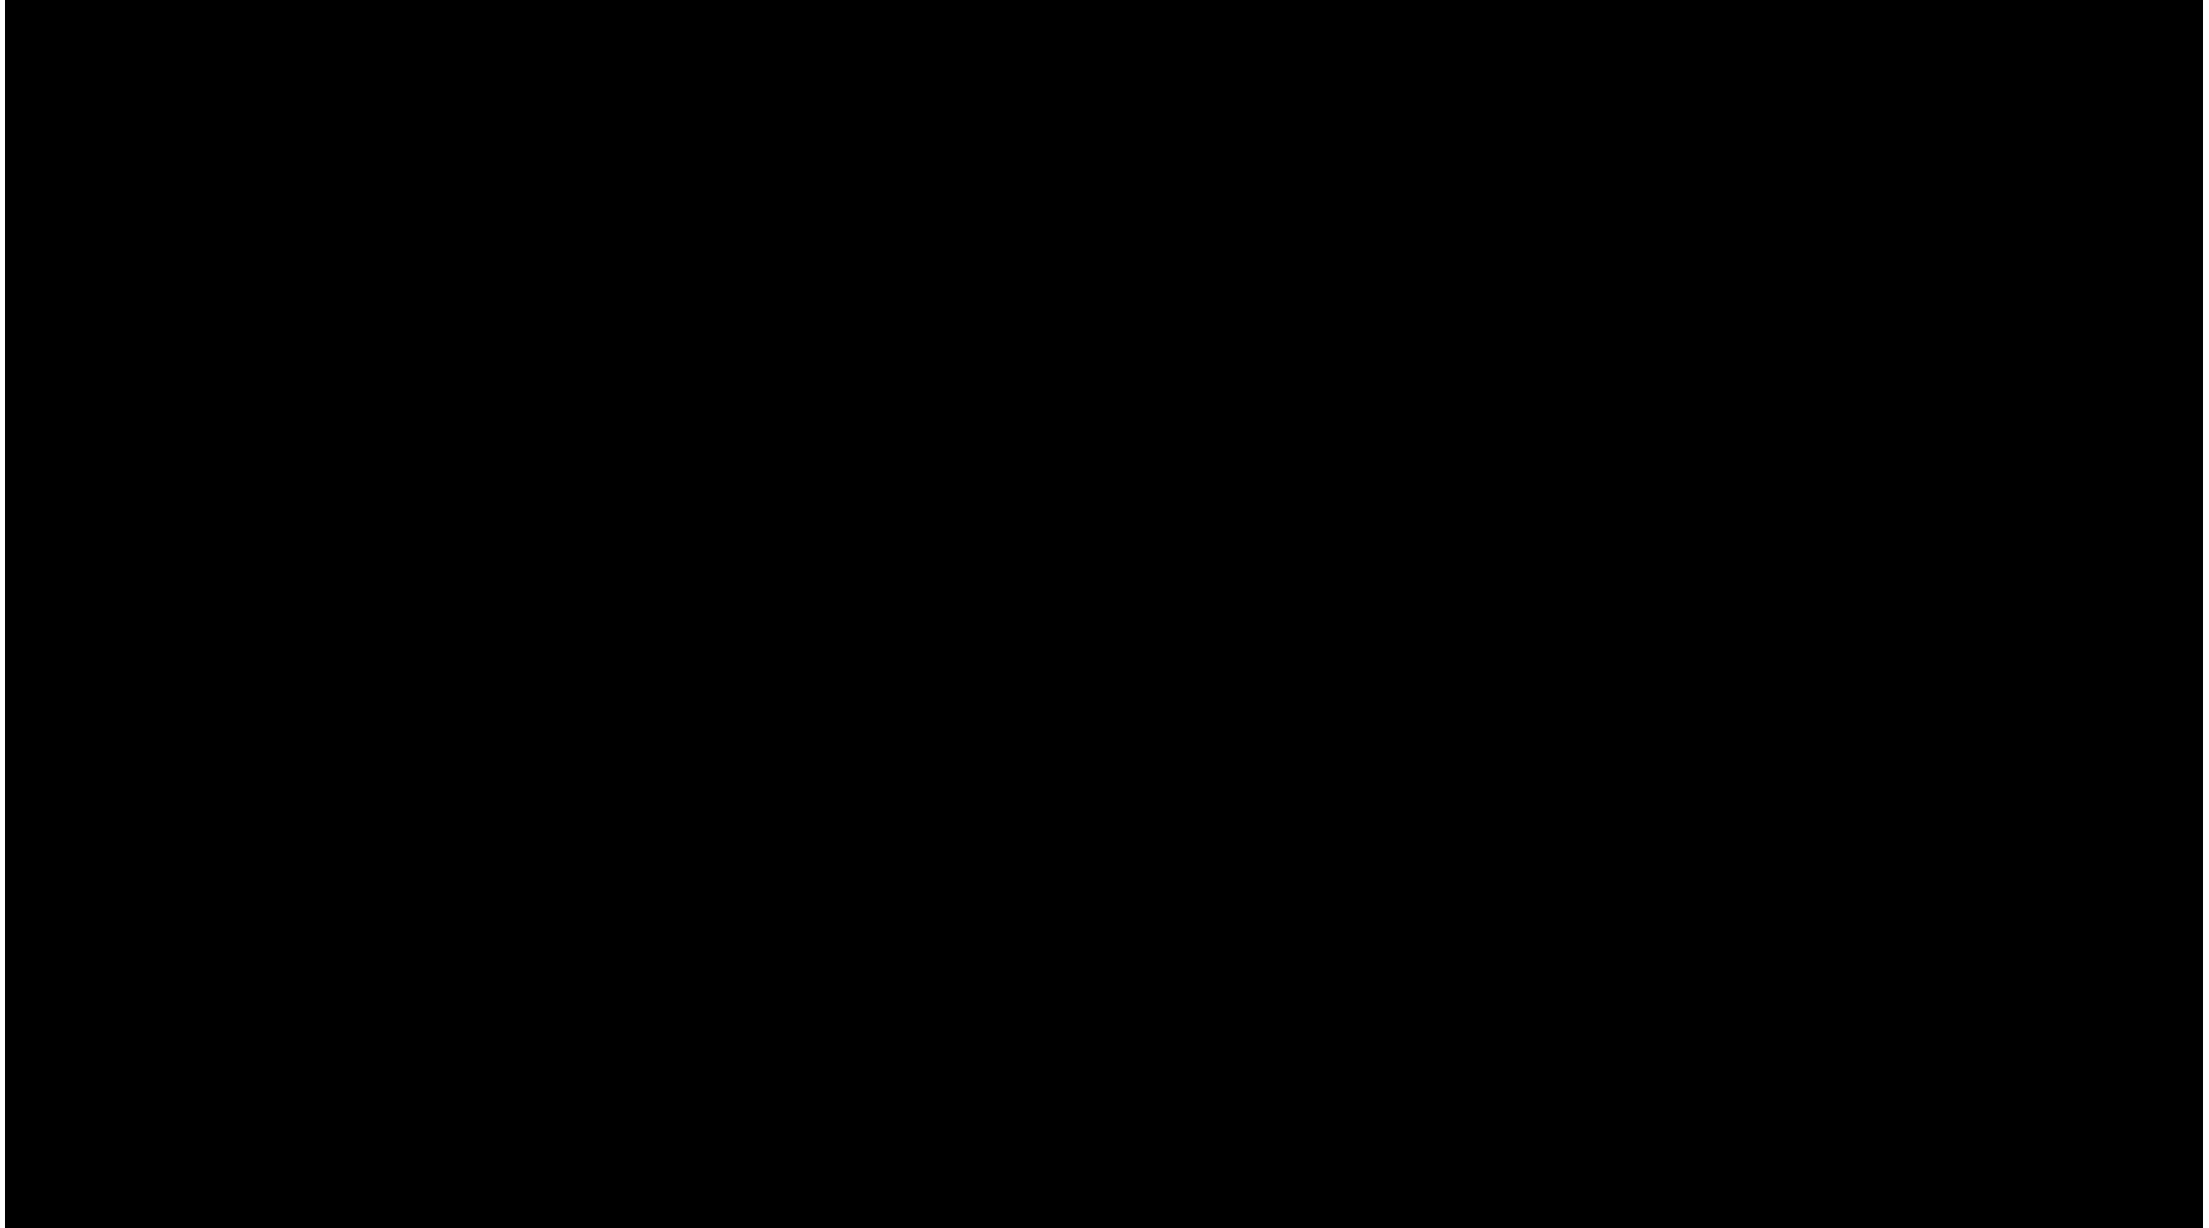

# Cognitive Concierge

# How can the Cognitive Campus concept add value to an attraction?

# Decision Making – Coping with Humans (IBM)

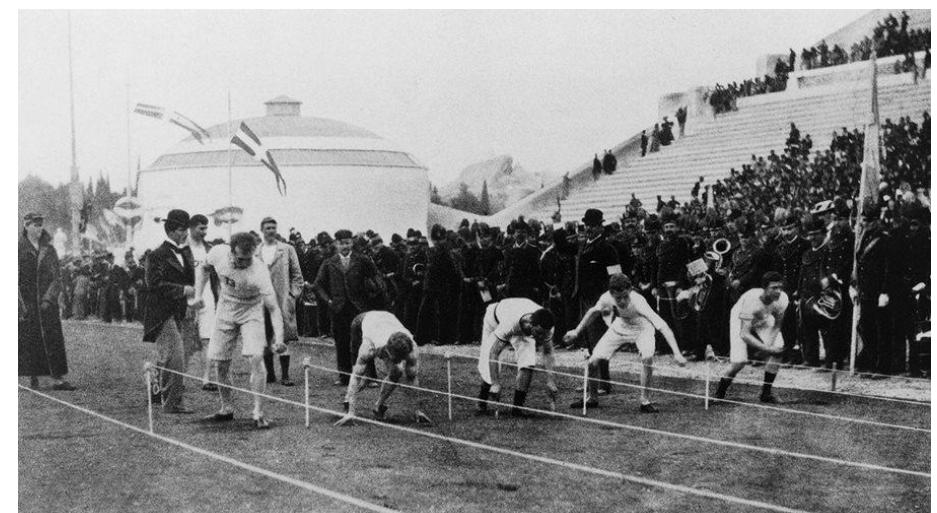

# Closing the Loop - Decision Making

- Big Data analysis requires a brain—a central analytics hub, to make decisions.
- Data scientists and model builders can build this hub. Accessing such talent using an outsourcing model is probably the most sensible option for tourism enterprises.
- An enterprise will therefore need “translators,” people able to connect the needs of the business with the technical skills of the modelers/analysts.
- The well established co-operative competence centre idea can help small enterprises pool resources and derive benefit from IoT.
- Investment should be in intuitive highly relevant tools with easy-to-use interfaces that can help frontline/front of house managers integrate data into day-to-day processes.

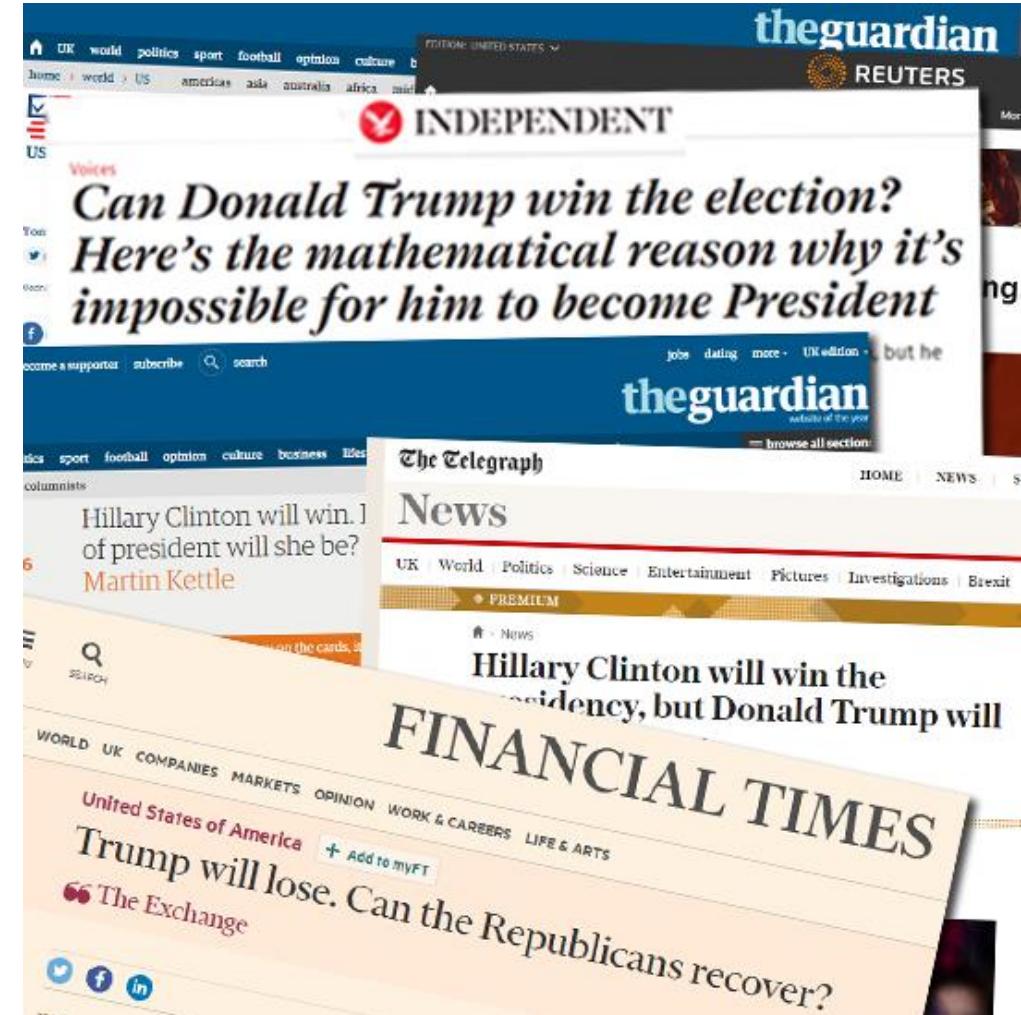

www.shutterstock.com - 261312809

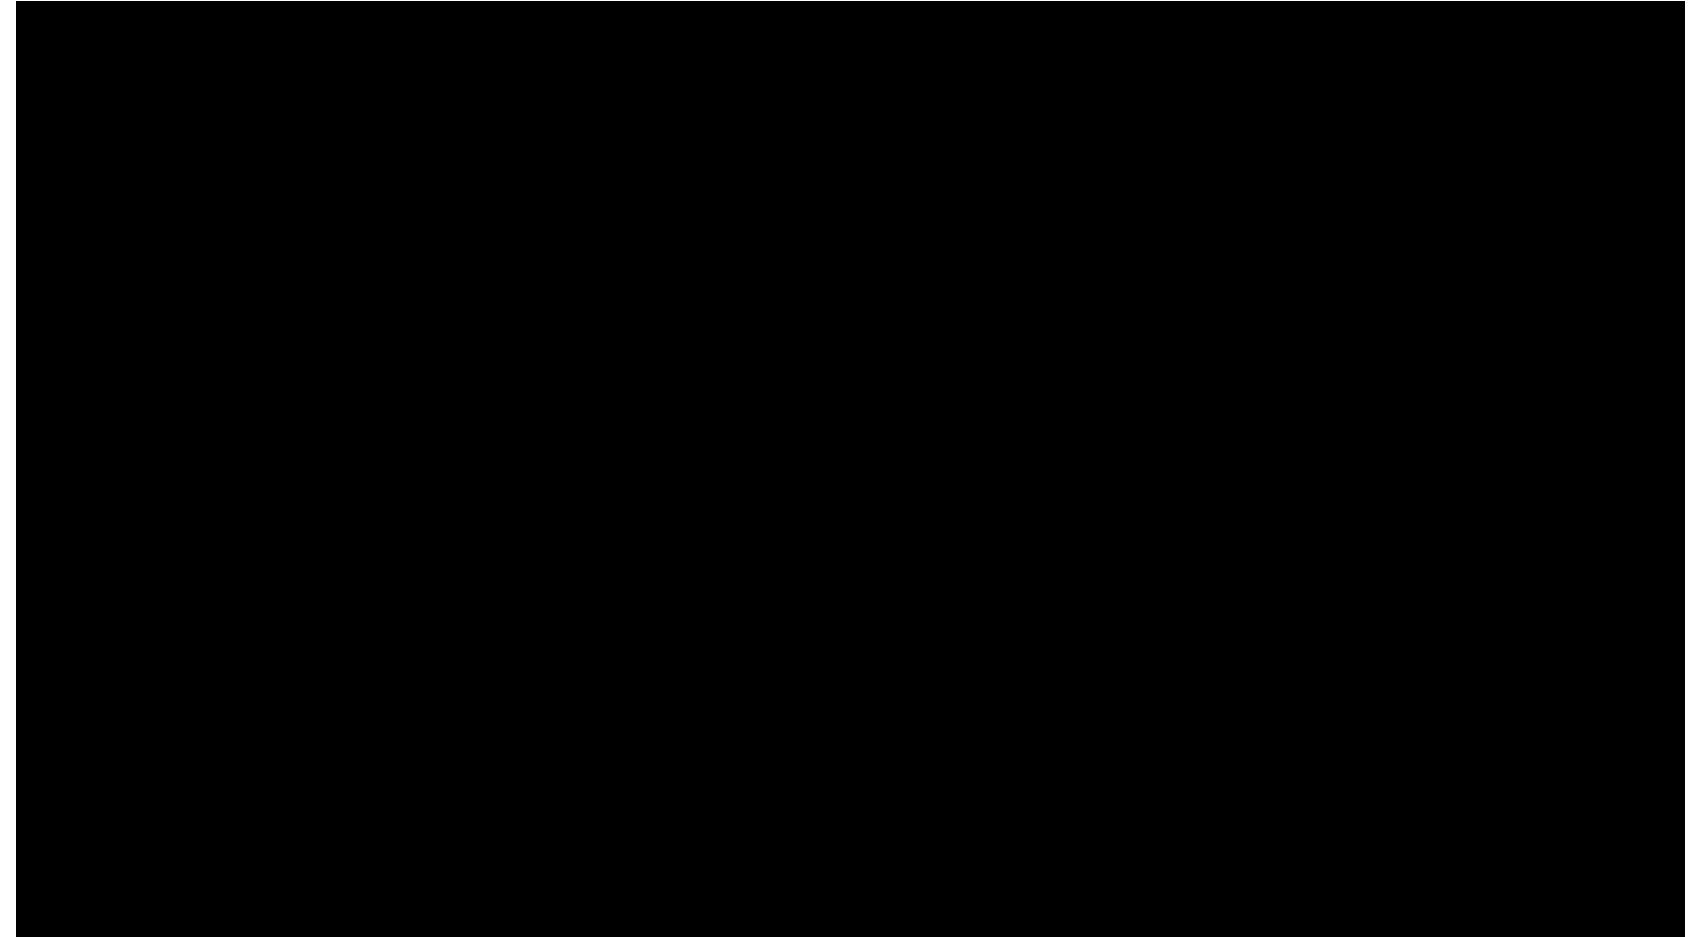

# Closing the Loop - Decision Making

- Thus far data and analytics based Decision making incorporates machine learning, artificial intelligence and requires significant Human involvement
- Best practice thus far has neither been humans or machines alone, but rather humans working in tandem with machines.
- Movement beyond big data to “soft AI” systems, such as IBM’s Watson. Such systems are capable of taking on more and more of the tasks that human labour used to conduct.
- Health warnings apply!

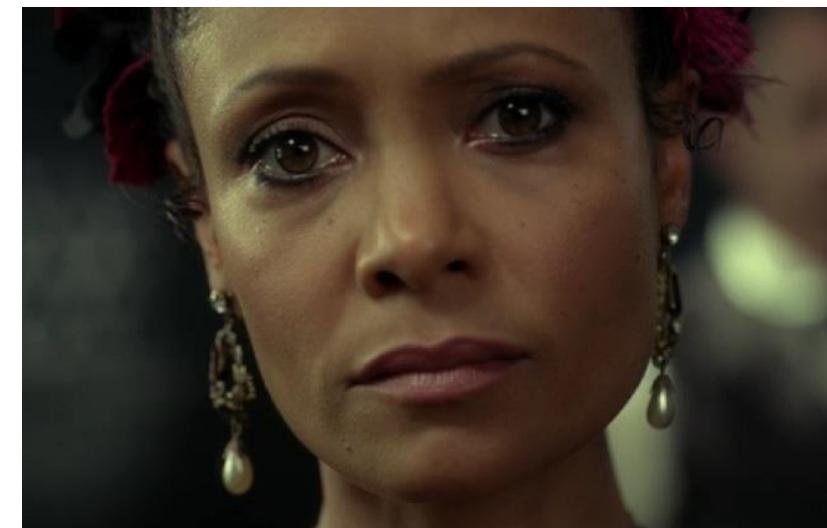

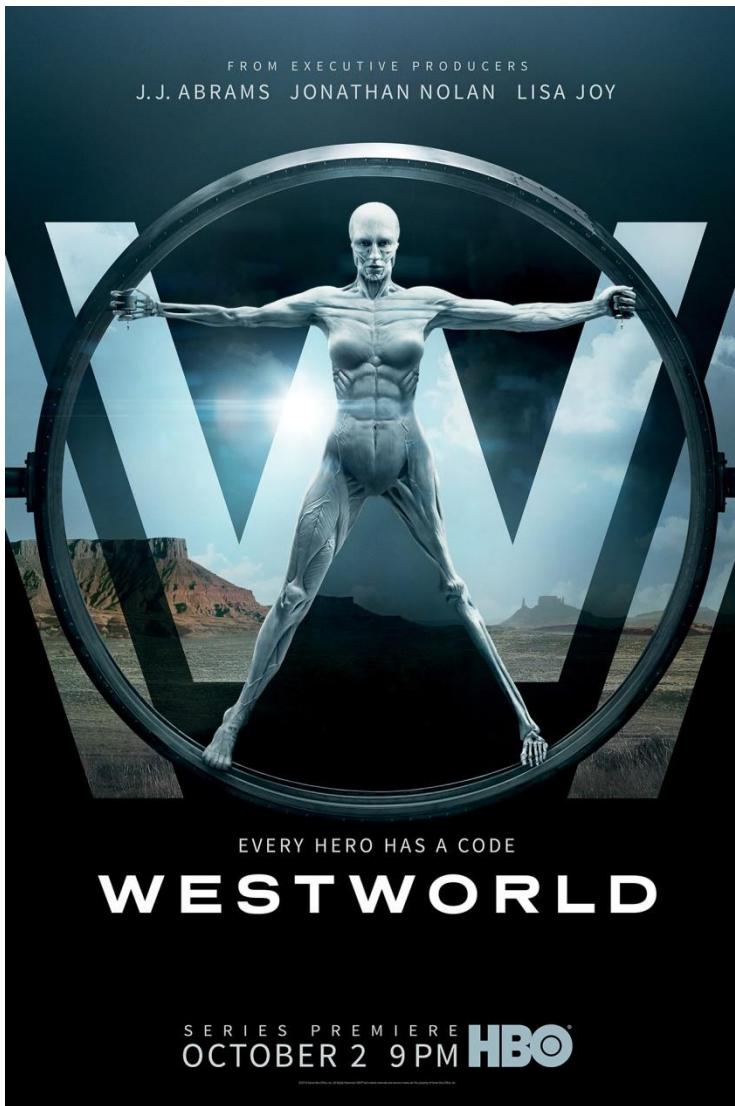

# Big Data Based Decision Making

- Data based Decision making moves immediately into the realms of Machine Learning or Artificial Intelligence.
- What are Machines good at?
- How to win?
- What does a Malevolent attack on this system look like??

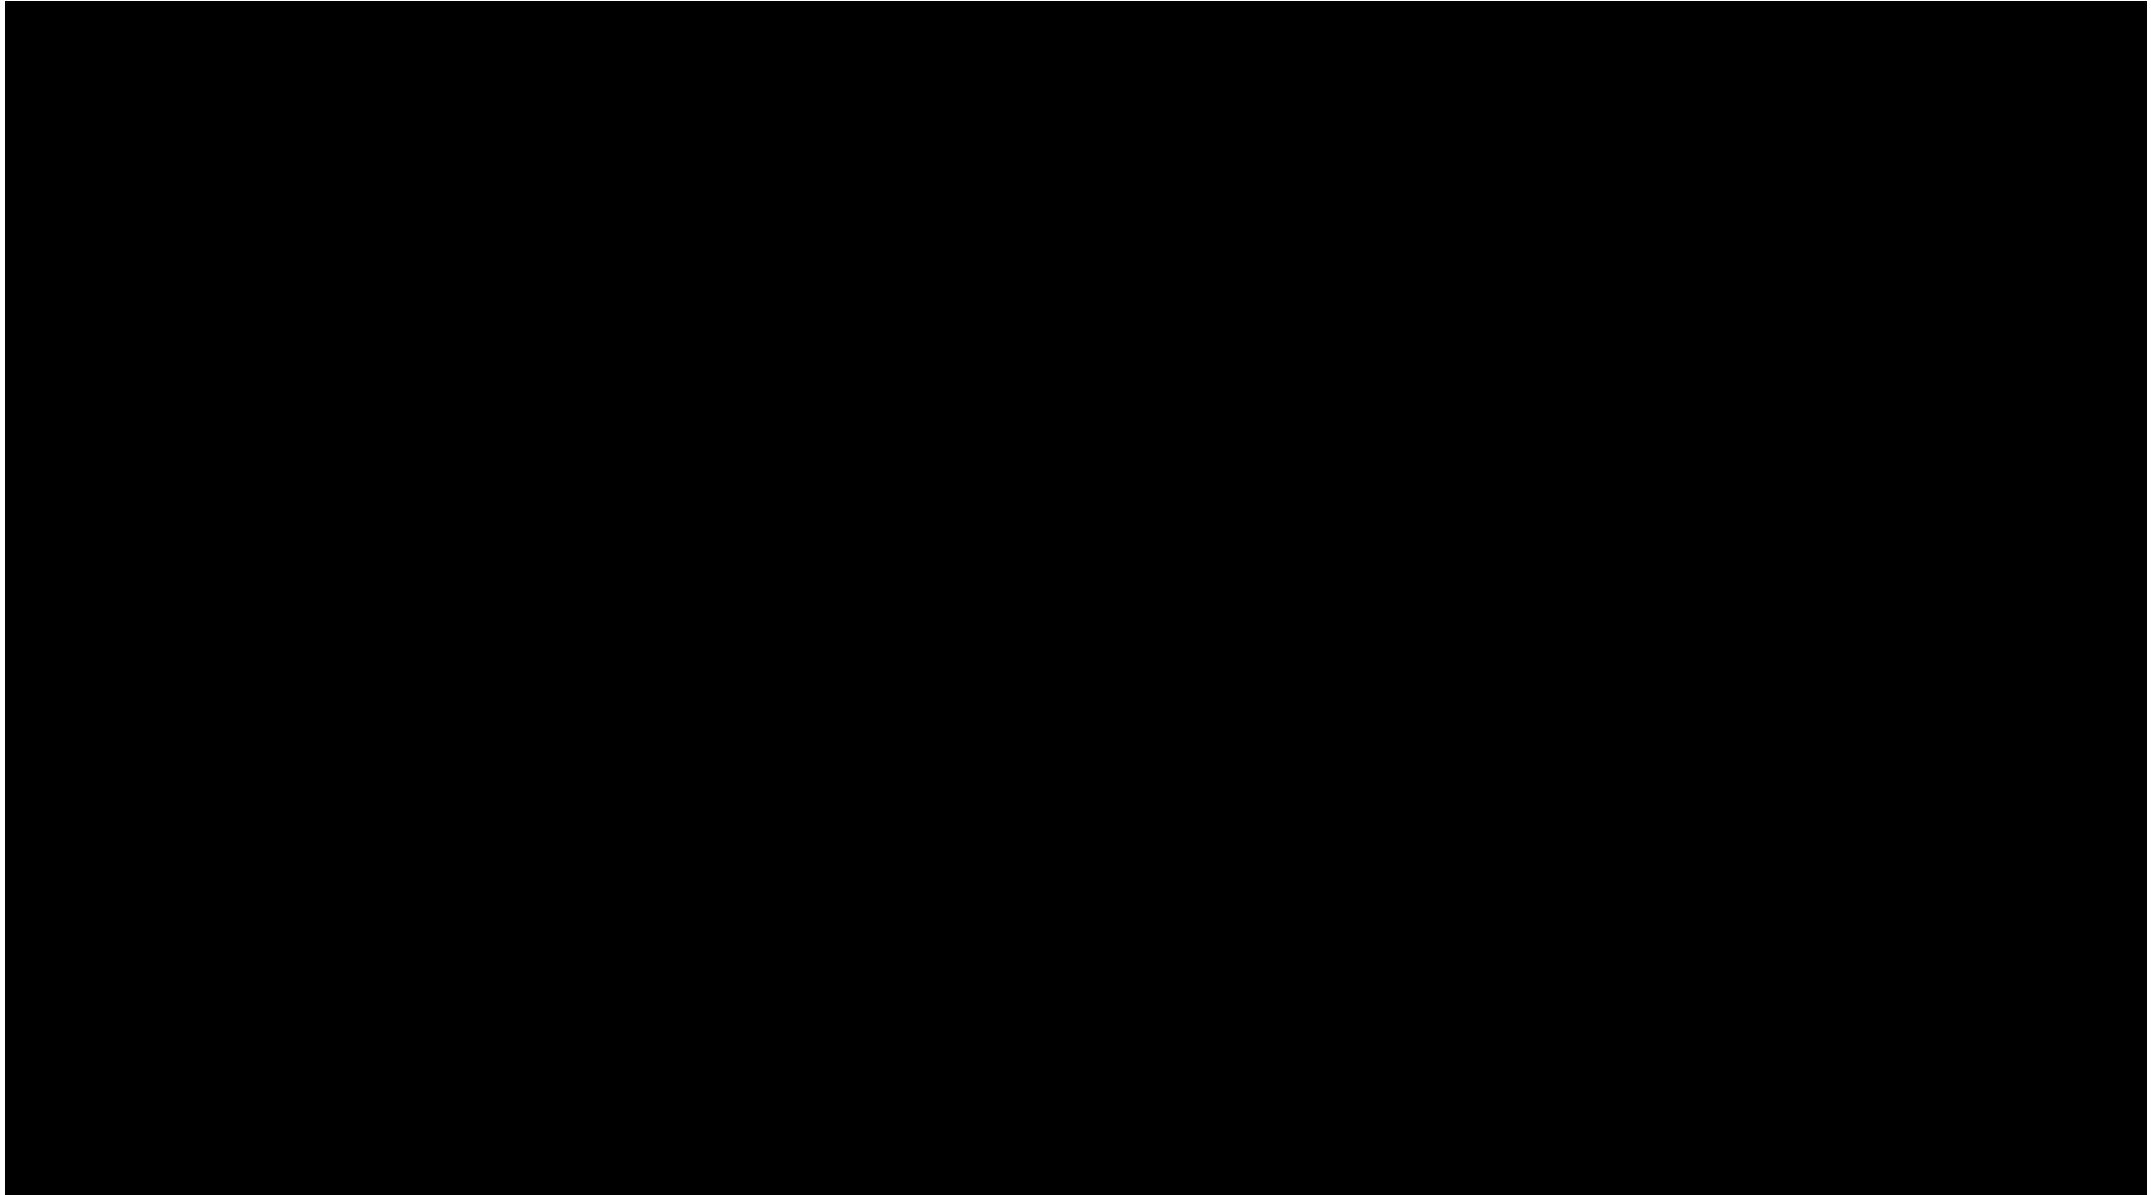

# The future of AI (What do we want from our Machines?)

# The future of AI (What do we want from our Machines?)

# What do we get? (DARPA)

# Data Engineering based Decision Making Example

- Data Analytics in Sport.
- In 2005 The NFL collected approximately 16MB of performance related player data *across an entire season*. Today far more is collected each game.
- In 2014 Manchester City had 11 full time data analysts as part of its sports science team
- GPS based raw data plus Prozone Metadata available for all training sessions and matchdays.
- Spikes in Workload, Fatigue and Fitness now routinely integrated within training programmes to prevent injury and to improve Athlete Strength and Conditioning .
- No longer the preserve of the elite athlete!! Schoolboy and Junior game data is now also routinely collected.
- How much useful information is being collected?
- An Example
  - "It is dangerous to mention any subject having high emotional content without hastily saying whether you're for or agin' it." ( from *How to Lie with Statistics* – Darrell Huff p.46)

# Some Decisions are Straightforward.....

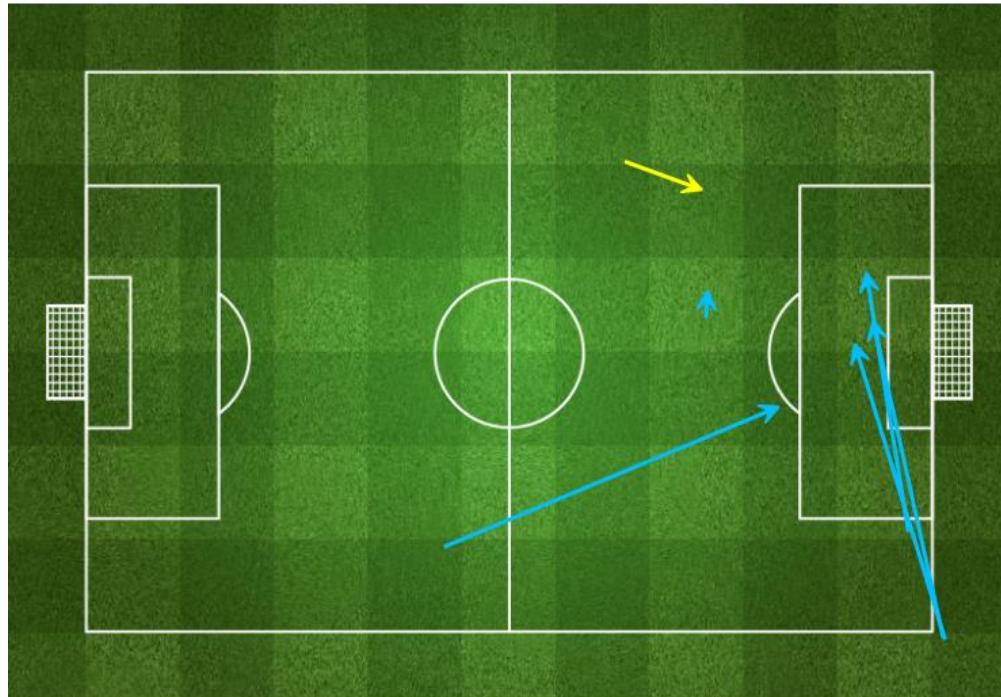

# Some not so much

- Why did France Lose?
  - France couldn't score a goal.
  - France couldn't prevent Portugal scoring
  - Portugal defended better than France
  - France underperformed on the day.
  - France's organisation was poor.
  - All of the above?
- Can Data Analytics help ?
  - Add value to coaching
  - Identify weaknesses
  - Suggest changes in personnel/formation
  - Enhance the spectator experience

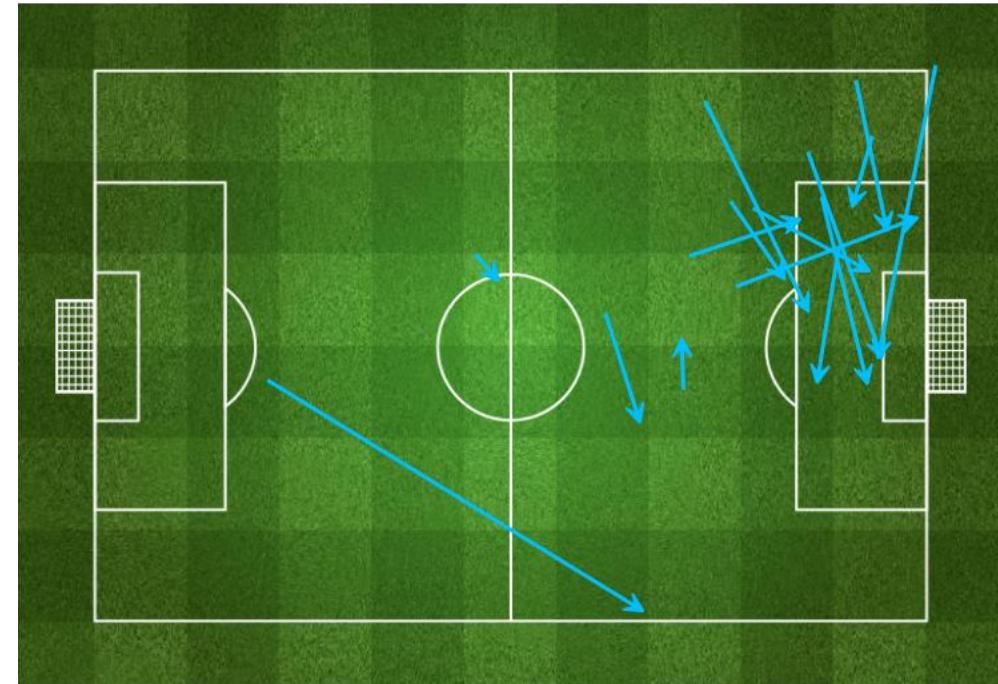

# Data says France created more chances – Portugal took theirs!!

### Portugal Chance Creation

Blue = Shot on Target Resulted

Yellow = Goal Assist

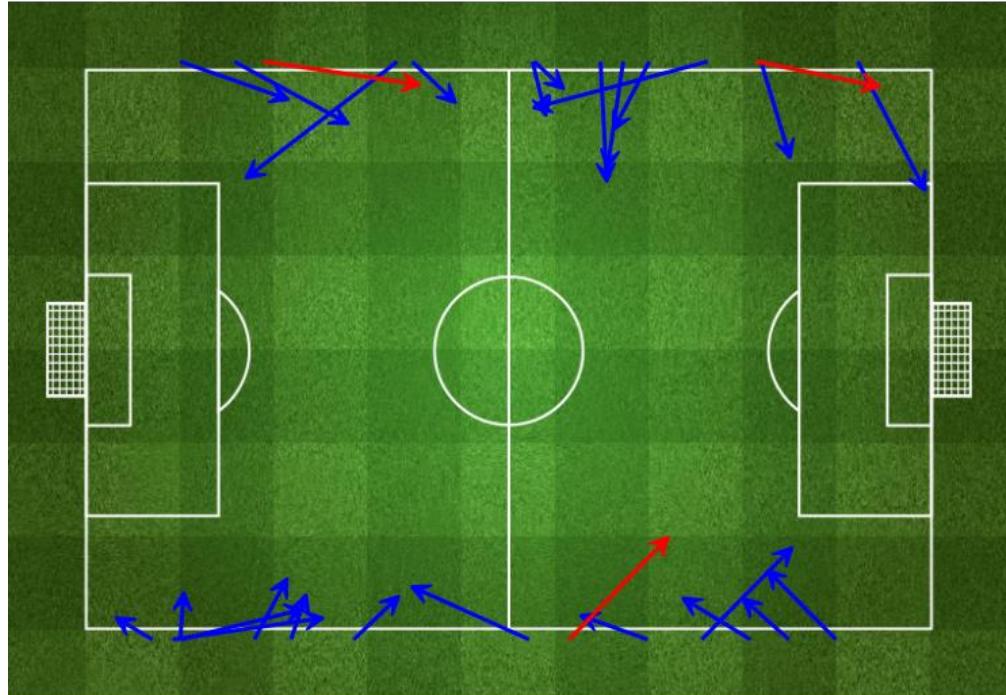

### France Chance Creation

Blue = Shot on Target Resulted

Yellow = Goal

- France created far more shots on target during the course of the game but could not convert any of them.

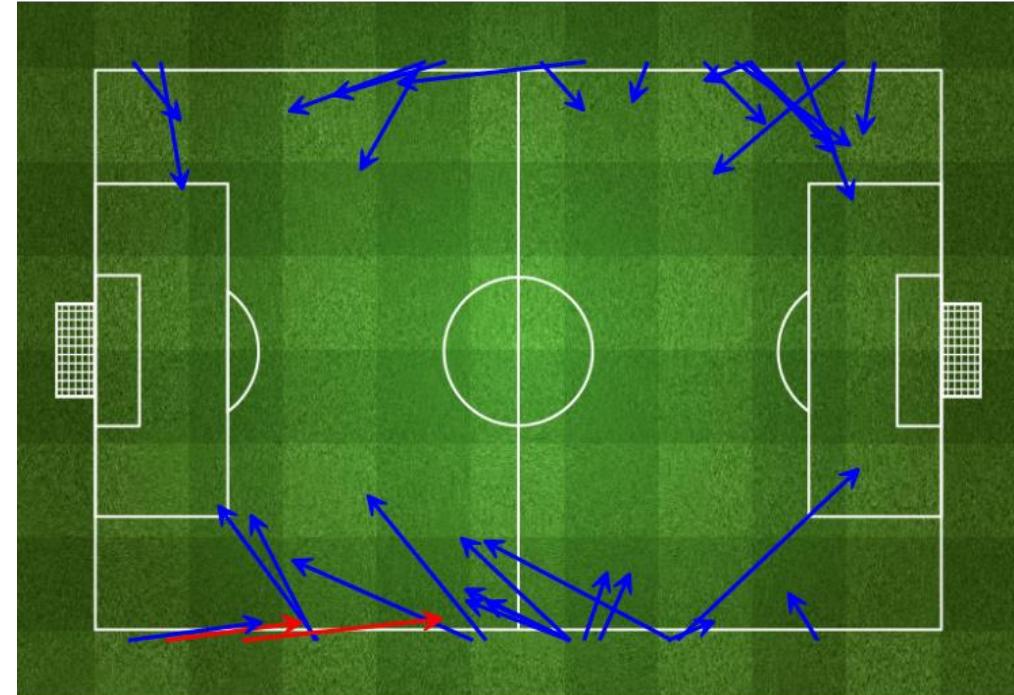

# Throw-in analysis

## Portugal Throws

Blue = Success

Red = Turnover of Possession

## France Throws

Blue = Success

Red = Turnover of Possession

- France turned possession over only twice on their own throw in, whereas Portugal lost possession three times on their own throw.

# What is Data Engineering?

- Sure those throw in stats are grand – nothing to see here.....(23:20).

# Advice for IoT Adoption

- Set aside a percentage of your R&D budget for investment in Innovation.
- Internal or External? Can you pool resources? Some type of Hybrid approach is generally best.
- Dan Kaufman (Google): Question what the fundamental innovation issue is in your business and think about how you would go about solving it as if technology adoption costs were not an issue. It is quite possible the Internet of Things will be a solution. It's a mistake to do it the other way around.
- You'll never own the cloud!! Therefore whatever platform you end up in make sure you can jump to another if costs / service / innovation are not satisfactory.
- Always make sure you can bring your Data with you!!

# A bright future for IoT/AI enabled Tourism ?? ;-)

# Internet of Things @UL
